YIELD LIMITATION EDITS CAPS - CUPS - FLOORS

CAPS - CUPS - FLOORS DO NOT APPLY TO IP OR INDEXED IP.

For IP AND INDEXED IP, Yield Limitation Flags 01, 04 AND 09, RATE YIELD Must Equal Approved Yield

Yield Limitation is calculated by line database.

If the Yield Limitation flag equals: 01

Average APH yield applies

Average APH yield falls between the cap and cup

There must be a previous approved yield

To calculate the Average APH yield:

Sum all annual yields - Divide by the number of years in the database that have yields or acres >0

Calculate the cup: Previous approved yield * .9

Calculate the cap: Previous approved yield * 1.20

CAPS - CUPS

CAPS & CUPS REQUIRE A PREVIOUS APPROVED YIELD

If Yield Limitation flag equals: 02

Capped yield applies **

The Average APH Yield is greater than the Yield Limitation Cap

To calculate the Average APH Yield:

Sum all annual yields - Divide by the number of years in the database that have yields or acres >0

Calculate the CAP: Previous approved yield * 1.20

If Yield Limitation flag equals: 03

Cupped yield applies *

The Average APH Yield is less than the cupped yield.

To calculate the Average APH Yield:

Sum all annual yields - Divide by the number of years in the database that have yields or acres >0.

Calculate the Cup: Previous approved yield * .9

*** IF YIELD LIMITATION FLAG = 03 THE TYPE 11 RECORD MUST HAVE A “Y” IN THE PREMIUM RATE SURCHARGE FIELD (FLD. 49) AND A 5% SURCHARGE IS APPLIED TO CONTINUOUS-RATED AND NON CONTINUOUS-RATED CROPS (CATEGORY B AND THE FOLLOWING CATEGORY C CROPS: 0023, 0028, 0029, 0036, 0052, 0053, 0058, 0060, 0089, 0092, 0201, 0202, 0205, 0206, 0215, 0216, 0217, 0218, 0219, 0220, 0221, 0222, 0223, 0224, 0225, 0226, 0228, 0237, 0238**

SEE EXHIBIT 15-6.**

NO YIELD LIMITATION APPLIES

FOR THIS YIELD LIMITATION FLAG THE AVERAGE APH YIELD MUST BE GREATER THAN THE YIELD CAP OR LESS THAN THE YIELD CUP

If the Yield Limitation flag equals: 04

Average APH yield applies

Cap/Cup do not apply

If there is a Previous Approved yield calculate the Cap/Cup

Calculate the Cup: Previous approved yield * .9

Calculate the Cap: Previous approved yield * 1.20

If there is no Previous Approved yield calculate the Average APH yield only

To calculate the Average APH Yield:

Sum all annual yields - Divide by the number of years in the database that have yields or acres >0

THERE MUST BE AT LEAST 1 YEAR IN THE DATABASE WITH AN ACTUAL YIELD TO QUALIFY FOR A YIELD FLOOR

A YIELD FLOOR CAN ONLY BE DETERMINED IF THERE IS A TRANSITIONAL YIELD >0

FOR NON CONTINUOUS-RATED CROPS TYPE 11 RECORD MUST HAVE A “Y” IN THE PREMIUM RATE SURCHARGE FIELD (FLD. 49) AND A 5% SURCHARGE IS APPLIED TO THE PREMIUM CALCULATION.

PREMIUM RATE SURCHARGE DOES NOT APPLY TO: 0012 (Blueberries), 0034 (Peaches) AND 0054 (Apples).

APH Adjustment Election (60% T-Yield Substitution) applies:

There is a T-yield greater than zero

At least one actual yield (A or R) in the database qualifies for the 60% yield substitution

All actual (unadjusted) yields in the database must be reported

For Continuous Rated crops:

The simple average of all (unadjusted) yields in the database will be calculated and will be the **Rate Yield**

60% of the T-yield will be calculated and substituted for any actual yield (A or R that qualifies) that is **less than** 60% of the T-yield (**any unadjusted yield that does**

NOT

qualify for substitution will be identified with a yield type of “AY or RY”)

The simple average of all yields in the database will be calculated again, including all substituted yields, and will be the **Approved Yield**

For NON-Continuous Rated crops:

60% of the T-yield will be calculated and substituted for any actual yield (A or R that qualifies) that is **less than** 60% of the T-yield (**any unadjusted yield that does**

NOT

qualify for substitution will be identified with a yield type of “AY or RY”)

The simple average of all yields in the database will be calculated again, including all substituted yields, and will be the **Approved Yield**

The **Rate Yield** must equal the Approved Yield

T15 EDIT FOR ADDED Practice/Type/Variety

If an APH crop database contains a **yield type of 'C'** for any annual yield field, then a **simple average T/yield** is based on the average of all other units, for the crop, practice and type in the county. After the T/yield has been determined, calculate the approved yield by adding all of the yields in the database containing yield types other than 'Z'. Divide the total by the number of years with data other than 'Z'.

A Determined Irrigated Yield for an added Irrigated Practice also requires a **yield type of 'C'**. In this situation, there will be no edit to determine the value of each Annual Yield, however, the Annual Yields will be summed and divided by the number of yields to determine the Approved Yield. Field number 81, Number of Years with Actual Yields on Reference Records, would equal zero. Field number 21, **Yield Indicator** would have a 'C' for this situation.

T15 EDIT FOR ADDED LAND

If an APH crop database contains a **yield type of 'L'** for any annual yield field and a **yield indicator of 'A'**, then an Added Land **T/yield** is based on the simple average of the existing optional units' approved APH yields within the basic unit structure of the crop in the county. After the T/yield has been determined, calculate the approved yield by adding all of the yields in the database containing yield types other than 'Z'. Divide the total by the number of years with data other than 'Z'.

If an APH crop database contains a **yield type of 'L'** for any annual yield field and a **yield indicator of 'AL'**, then an Added Land **T/yield** for Sugarcane is based on the simple average of the existing optional units' approved APH yields within the basic unit structure of the crop in the county. After the T/yield has been determined, calculate the approved yield by adding all of the yields in the database containing yield types other than 'Z'. Divide the total by the number of years with data other than 'Z'.

If an APH crop database contains a **yield indicator of 'B' or 'C'**, then an Added Land T/yield is a **variable T/yield**. After the T/yield has been determined, calculate the approved yield by adding all of the yields in the database containing yield types other than 'Z'. Divide the total by the number of years with data other than 'Z'.

If an APH crop database contains a **yield indicator of 'BL' or 'CL'**, then an Added Land T/yield for Sugarcane is a **variable T/yield**. After the T/yield has been determined, calculate the approved yield by adding all of the yields in the database containing yield types other than 'Z'. Divide the total by the number of years with data other than 'Z'.

Determine the Yield Limitation flag by the following method:

If there is a previous approved yield calculate the 'CAP' and 'CUP':

The cup for the record = Previous Approved yield * .9

The cap for the record = Previous Approved yield * 1.20

Table results of these calculations

Calculate the yield floor

Yield floor = T/yld * applicable % (for the number of actual and/or assigned yields in the reference unit.)

(1) actual or assigned yield

Then multiply the T/yld by .70

The result must equal the approved yield if yield floor is applicable.

(2-4 yrs) actual or assigned yields

Then multiply the T/yld by .75

The result must be equal to the approved yield if the yield floor is applicable.

(5 + yrs) actual or assigned yields

Then multiply the T/yld by .80

The result must equal the approved yield if the yield floor is applicable.

Table results of yield floor calculation

Edits:

1. Lower Level Yield Validation Threshold: (DAS Error 15072)

The record will be rejected if the approved or any annual yield exceeds the lower level yield validation threshold. After review by an Insurance Provider underwriter, yield records with approved or annual yields that exceed the lower level validation threshold but do not exceed the maximum acceptable level for the state/county/crop/type/practice may be resubmitted to DAS with the Excessive Yield Edit Bypass flag set to "1". In accordance with the SRA requirement that data submitted to DAS be accurate, resubmission of yield records with the review indicator set is considered confirmation that an appropriate underwriting review has occurred and confirmed that the yields are reasonable and accurate.

2. Maximum Acceptable Yield: (DAS Error 15073)

Insurance provider verified yield records with approved or annual yields exceeding the maximum acceptable level will not be accepted by DAS, except as authorized by RMA. In such instances, verified yield records with approved or annual yields in excess of the maximum acceptable level may be submitted to the RMA Actuarial Division (AD). Include a copy of the underwriting review and supporting documentation, as well as Insurance provider certification of the accuracy of the yield, in the submission for review. AD in conjunction with the Product Development Division (PDD) will coordinate any yield reviews and with the applicable RMA Regional Office (RO), as necessary. If the edit is determined to be too low, the limit for the state/county/crop/type/practice may be increased and the Insurance Provider notified to resubmit the affected yield records. Conversely, if a yield is determined to be unacceptable, assigned yield and related procedures will apply.

Perennial Crop Edits:**1. Maximum Acceptable Yield:** (DAS Error 15073)

For perennial crops, RMA has established only a maximum acceptable yield level. Yield records with approved or annual yields exceeding the maximum acceptable level for the crop will not be accepted unless it is determined by RMA that the maximum acceptable level is not representative for the state. After the Insurance Provider verifies that yields exceeding the maximum acceptable level are accurate, the Insurance Provider may submit the yields through the AD for review. AD, in conjunction with PDD will coordinate any yield reviews with the applicable RO as necessary. If the maximum acceptable level is determined to be too low, the limit for the state/crop may be increased and the Insurance Provider notified to resubmit affected yield records. Conversely, if a yield is determined to be unacceptable, assigned yield and related procedures will apply.

RMA, Actuarial Division, will maintain a yield limit table providing the lower level validation thresholds and maximum acceptable edit levels by Crop/State/County/Type/Practice (by Crop/State for perennial crops). The yield limit table will be provided to the reinsured companies via the Reporting Organization (RO) Server on a weekly basis for DAS edits. The lower level yield validation thresholds and maximum acceptable edit levels are for internal insurance provider use and are not to be distributed for field usage. RMA may modify the yield limit table on a state/crop/county/type/practice basis based upon acceptable company documentation of yield validity.

Yield edits and yield reporting are not applicable for the following insurance plans in the 15 Record, however, ADM validations on maximum protection is performed in the company's Acreage and Loss submissions through DAS:

INDEXED INCOME PROTECTION YIELDS

Example 1: Producer's average yield is *lower* than the County average yield.

<u>Year</u>	<u>Producer's Yield</u>	<u>County Yield</u>
1997	46	48
1998	30	26
1999	42	50
2000	0	21
2001	<u>54</u>	<u>49</u>
	172/5=	194/5=
Average	34	39

County Average - Producer's Average = Index
 39 - 34 = 5

2001 County Yield = 49

2001 Expected County Yield - Index = **Approved (Indexed) Yield**
 49 - 5 = 44

Example 2: Producer's average yield is *higher* than the County average yield.

<u>Year</u>	<u>Producer's Yield</u>	<u>County Yield</u>
1997	73	64
1998	72	64
1999	71	63
2000	70	62
2001	<u>69</u>	<u>62</u>
	355/5=	315/5=
Average	71	63

County Average - Producer's Average = Index
 63 - 71 = (-8)

2001 County Yield = 62

2001 County Yield - Index = **Approved (Indexed) Yield**
 62 - (-8) = 70

Category B - APH Crops that No Longer Have CAPPED YIELDS
