CONTINUOUS RATE CALCULATION

Note: The following capping procedure is intended to keep a producer's base premium rate including the residual factor from exceeding 20% more than what this year's insurance choices would have been last year given this year's rate yield and coverage level selection. It is not intended to cap a producer's actual premium from last year as his or her APH may have changed as well as the coverage level elected.

Current Year's Yield Ratio = Rate Yield/Current Year's Reference Yield
(Field 79)
(Note 14) (Note 2)

Current Year's Continuous Rating Base Rate = (Current Year's Yield Ratio ** Current Year's Exponent) *

Current Year's Adjusted Continuous Rating Base Rate = Greater of: ((Current Year's Continuous Rating Base Rate +

(Note 10) Coverage Level Rate Differential * Residual Factor

Adjusted Yield Span Base Rate = Greater of: ((Yield Span Base Rate + Additional Coverage Rate) *
(Field 43) Multiplicative Factor) OR Designated Rate
(Note 10)

Capped Adjusted Yield Span Base Premium Rate = Adjusted Yield Span Base Rate * Prior Year's Coverage Level Rate
