Sept. 2005

2006 COMMODITY INSURANCE FACT SHEET

Table Grapes

Arizona

Crop Insured

Vineyards in at least their fourth growing season after set out or their third season after grafting may be insured. All varieties of table grapes may be insured. Growers must insure all their acreage of a particular variety in a county at the same coverage level. However, one variety can be insured and not another. For example, a grower could insure all Ruby Seedless and none of Thompson Seedless vineyards.

Counties Available

Table grapes are insurable in Maricopa, Pinal, and Yuma counties. Table grapes in other counties may be insurable by written agreement if specific criteria are met. Contact a crop insurance agent for more details.

Causes of Loss

Adverse weather conditions¹
Failure of irrigation water supply²
Fire³
Insects⁴
Plant disease⁴
Wildlife⁵

¹Natural perils such as hail, frost, freeze, wind, drought, and excess moisture. ²If caused by an insured peril during the insurance period. ³Unless weeds and undergrowth are not controlled or unmulched pruning debris is not removed. ⁴But not damage due to insufficient or improper application of control measures. ⁵Unless wildlife control measures have not been taken.

Insurance Period

Producers must apply for coverage with a crop insurance agent before January 31 to insure the crop they plan to harvest that year. Insurance coverage begins in February for vineyards not previously insured and ends the earlier of the end of harvest or the date specified by variety in the special provisions of insurance.

Important Dates

Sales Closing.....January 31
Acreage Report Due.....January 31

Coverage Levels and Premium Subsidies

The guarantee is production, measured in lugs of grapes. Individual amounts of insurance are based on a grower's production history. An individual's approved average yield is calculated from a minimum of 4 to 10 years of production records that are provided to their insurance agent. Growers can select a coverage level ranging from 50 to 75 percent of their approved average yield and 50 to 100 percent of a price announced by USDA, or catastrophic (CAT) risk protection based on 50 percent of their approved yield and 55 percent of the price.

Price Election. The price used to calculate your claim or indemnity. Price elections vary by variety and county. Please consult a crop insurance agent.

Cost of Crop Insurance

The Agricultural Risk Protection Act of 2000 raised the subsidies for federal crop insurance premiums substantially. For CAT coverage, growers pay an application fee of \$100, per county with 100 percent of the premiums being subsidized. Higher coverage levels are subsidized at lower rates; USDA pays at least 50 percent of the premium. For more detailed information about the amounts of coverage and premiums, please contact a crop insurance agent .

Loss Example

Assume 65-percent coverage level, flame sSeedless variety in all counties, an average yield of 680 lugs per acre and 100-percent share.

680	Lugs
x .65	Coverage level percentage
442	Lugs per acre guarantee
- 100	Lugs per acre actually produced
342	Lugs per acre loss
x \$9.95	Price election
\$ 3,402.90	Gross indemnity per acre

Where to Purchase Crop Insurance

All MPCI, including CAT coverage insurance policies, are available from private insurance agents. A list of crop insurance agents is available on the RMA website at: <http://www3.rma.usda.gov/tools/agents/>
