 Acreage Report DueMarch 15

Insurance Period

Coverage begins on February 1. Coverage ends on November 15.

Coverage Levels and Premium Subsidies

The production for the insurance guarantee is measured in pounds of whole in-shell walnuts. Individual insurance amounts are based on your actual production history (APH). An insurance agent calculates your approved average yield using 4 to 10 years of production records. You can choose a coverage level from 50 to 75 percent of your approved average yield and 55 to 100 percent of a price announced by USDA. Catastrophic Risk Protection (CAT) coverage is also available and is based on 50 percent of your approved yield and 55 percent of the price.

Price Election

The price used to calculate your premium and indemnity.

Walnuts.....\$ 1.30 per pound

Cost of Crop Insurance

CAT coverage has an application fee of \$300 with 100 percent of the premiums being subsidized. Higher coverage levels are subsidized at lower rates though USDA pays at least 50 percent of the premium. For more detailed information about coverage and premium amounts, please contact a crop insurance agent or your local county Farm Service Agency office for an agent listing.

Loss Example

Assume 65-percent coverage, an average yield of 2,200 pounds per acre, 100-percent price election of \$1.30 per pound, and 100-percent share.

2200	Pounds per acre average yield (APH)
<u>x .65</u>	Coverage level percentage
1430	Pounds per acre guarantee
<u>- 400</u>	Pounds per acre actually produced
1030	Pounds per acre loss

x \$1.30 Price election
\$1,339 Gross indemnity per acre
