Definitions

Harvest Price - A price determined in accordance with the Commodity Exchange Price Provisions and used to value production-to-count for revenue protection.

Projected Price - A price determined in accordance with the Commodity Exchange Price Provisions.

Production Guarantee - The number of bushels (tons for corn insured as silage) determined by multiplying the approved yield (per acre) by the coverage level percentage you choose.

Revenue Protection - An insurance plan that provides protection against revenue loss due to production loss, price decline or increase, or a combination of both.

Revenue Protection Guarantee - For revenue protection only, your production guarantee (per acre) multiplied by the greater of the projected price or harvest price.

Yield Protection - An insurance plan that only provides protection against a production loss.

Yield Protection Guarantee - For yield protection

only, your production guarantee (per acre) multiplied by your projected price.

Coverage Levels and Premium Subsidies

Individual insurance amounts are based on your production history. Your approved average yield is calculated from 4 to 10 years of production records you provide to an insurance agent. Coverage levels range from 50 to 85 percent of your approved yield. Crop insurance premiums are subsidized as shown in the following table. For example, if you choose the 65-percent coverage level, your premium share would be 41 percent of the base premium. Catastrophic Risk Protection (CAT) coverage is fixed at 50 percent of your approved yield and 55 percent of the price election.

Item	Percent								
	50	55	60	65	70	75	80	85	
Coverage Level	50	55	60	65	70	75	80	85	
Premium Subsidy	67	64	64	59	59	55	48	38	
Your Premium Share	33	36	36	41	41	45	52	62	

CAT is 100-percent subsidized with no premium cost to you. There is, however, an administrative fee of \$300 per crop per county, regardless of the acreage.

Late and Prevented Planting

Coverage that provides reduced protection on acreage that is planted late, or that cannot be planted by the final planting date or within the late planting period.

Loss Example

Assume irrigated corn for grain with an average approved yield of 150 bushels per acre, 65-percent coverage level, 100-percent share, and on a acre basic unit. The projected price is \$3.89 and the harvest price is \$3.49. Due to insurable cause of loss, the production-to-count is 70 bushels.

Yield Protection		Revenue Protection
150	Bushels/Acre APH yield	150
<u>x 0.65</u>	Coverage Level	<u>x 0.65</u>
97.50	Bushels/Acre Guarantee	97.50
<u>x \$3.89</u>	Projected Price	<u>x \$3.89</u>
\$379.28	Insurance Guarantee	\$ 379.28
70	Bushels Produced	70
