PEACH VARIETY LISTING

ALABAMA (01)--FLORIDA (12)--GEORGIA (13)--SOUTH CAROLINA (45)

The following list is for yield computation purposes. Inclusion on the list does not imply that a variety is insurable. Refer to the Special Provisions found on the RMA Actuarial Information Browser for each county for chilling hour insurability limitations. Any variety not listed below must be referred to the Valdosta Regional Office for chilling hour determination and season maturation category. Highlighted data was added or modified for the current update of the list. Questions may be directed to the Valdosta Regional Office at (229) 242-7235 or through e-mail: rsoga@rma.usda.gov.

***Season:**

Season is determined from research information that rates variety ripening as “Days Before Elberta” (DBE) or “Days After Bloom” (DAB). The following criteria were used to assign a season:

<u>Season</u>	<u>Days Before Elberta</u>	<u>Days After Bloom</u>
Early	> 40 (< -40)	< 85
Mid	40 to 20 (≥ -40 and ≤ -20)	85 - 105
Late	≤ 19 to after Elberta (≥ -19)	> 105

For example:

Redhaven is rated as 28 DBE (-28) and is categorized as a mid-season variety.
 Redglobe is rated as 13 DBE (-13) and is categorized as a late-season variety.
 Flordaking is rated as 69 DAB and is categorized as an early-season variety.
