2007 COMMODITY INSURANCE FACT SHEET

Tobacco (Flue, Fire, Dark Air) Virginia

Crop Insured

The tobacco production guarantee policy in Virginia covers tobacco types 11A, 21, and 37. This fact sheet does **not apply** to burley tobacco.

Quota Buyout — The termination of the quota poundage program changed the way these types are insured. Producer classification listings are no longer published. Carryover policyholders with a classification yield in their actual production history (APH) database will retain the classification yields until they are eventually replaced by four actual or assigned yields. Coverage for all tobacco insureds, with or without a classification yield, is now based on standard APH procedures.

Counties Available

Flue-cured insurance is available in all counties where the type has historically been grown. Acreage may also be insured in other counties if specific criteria are met. Contact a crop insurance agent for more details.

Causes of Loss

Adverse weather conditions¹
Failure of irrigation water supply²
Fire
Insects³
Plant disease³
Wildlife

¹Natural perils such as hail, excess precipitation, drought, wind, etc. ²If caused by an insurable peril during the insurance period.

³If proper applications of disease or pest control measures are applied.

Insurance Period

Coverage begins at transplanting and ends at the earliest of: 1) total destruction of the crop, 2) weighing-in at point of delivery, 3) final adjustment of a claim, 4) removal of the tobacco from the field where grown (except for curing, grading, packing, or immediate delivery to a buyer), or 5) November 30, 2007 for Type 11A, or 6) March 15, 2008 for Types 21 & 37.

Important Date

Sales Closing..... March 15, 2007

Final planting and acreage report dates vary by county and type. Contact a crop insurance agent for specific dates in your county.

Price Elections

Type →	Flue-Cured	Fire-Cured	Dark Air
Price Election	\$1.52	\$1.98	\$1.70

Price elections are posted on the RMA Web site at:
<http://www3.rma.usda.gov/apps/pricesinquiry/>

Definitions

Classification Yield— A yield for those producers who were listed on the classification listing last published for the 2006 crop year. The yield was based on Farm Service Agency (FSA) records for the period 1995-2004. For 2007, the APH yield for insureds with a classification yield will be based on a combination of the classification yield and the insured's reported yields beginning with the 2005 crop year.

Example: Insured has a classification yield of 2150 in the APH database. Insured reported a yield of 2,400 pounds per acre for 2005 and 2,000 pounds per acre for 2006. The insured's 2007 APH yield is calculated using a minimum of four yields:

2150	Classification yield
2150	Classification yield
2400	Actual yield for 2005
+	2000 Actual yield for 2006
<hr/>	
8700	÷ 4 = 2175 lbs/acre APH

Production Report— A production report for the previous crop year is due to your agent before April 30, 2007, or a yield will be assigned.

Coverage Levels and Premium Subsidies

Coverage level options range from 50 to 75 percent of your approved yield and are subsidized as follows:

Coverage Level % →	50	55	60	65	70	75
Premium Subsidy %	67	64	64	59	59	55
Your Premium Share %	33	36	36	41	41	45

Catastrophic (CAT) coverage is 50 percent of your APH yield at 55 percent of the price election. CAT is fully subsidized and there is no premium cost except for a \$100 administrative fee, regardless of acreage.

Duties in the Event of Damage or Loss

- If crop damage occurs, give notice within 72 hours of initial discovery of damage.
- Protect the crop from further damage if possible by providing sufficient care.
- If representative samples are required of any unharvested acreage, the strips must be at least 5 feet wide (at least two rows), extending the entire length of the field. Samples must not be harvested or destroyed until after a field inspection is made.
- If you give notice of damage, you must leave all tobacco stalks and stubble intact until inspected.

Insurance Units

Your insurable acreage is grouped into a unit based on one of the following unit arrangements.

Basic Units: A basic insurance unit includes all of your tobacco acreage, by type, in the county in which you have 100-percent share. For example, the tobacco acreage on your own farm (including any cash-rented land) would all be one basic unit. If you also grew tobacco on shares with another entity, that acreage would be a separate basic unit. Premiums are reduced 10 percent if you insure under basic units.

Optional Units: If a basic unit consists of two or more farm serial numbers (FSN) and certain record-keeping criteria are met, you may select optional units by FSN. The 10-percent basic unit premium discount will not apply.

Late Planting

For any insured acreage initially planted after the final planting date (FPD), the production guarantee will be reduced as follows:

1. One percent per day if planted during the 1st through the 10th day immediately following the FPD;
2. Two percent per day if planted during the 11th through the 15th day after the FPD.

The premium amount for late planted acreage will be the same as for timely planted acreage.

Prevented Planting

Prevented planting provisions do not apply.

Loss Example

This example is for flue-cured tobacco and assumes the 75-percent coverage level, APH yield of 2213 lbs per acre, price election of \$1.52, and one basic unit.

2,213	Producer's APH yield
x .75	Coverage level
1,660	Pounds per acre guarantee
= 660	Pounds per acre harvested
1,000	Pounds per acre loss
x \$1.52	Price election
\$1,520	Indemnity per acre
= 45	Estimated premium per acre
\$1,475	Net indemnity per acre
