2010 COMMODITY INSURANCE FACT SHEET

Wheat—Crop Revenue Coverage Pennsylvania

Crop Insured

Wheat grown for grain may be insured under the crop revenue coverage (CRC) plan of insurance if planted on insurable acreage located in a county with applicable actuarial documents. Any wheat acreage that is inter-planted with another crop or planted into an established grass or legume is not insurable. CRC provides protection against a decline in market prices as well as a shortfall in production. The guarantee is in dollars and a loss situation occurs when the dollar value of your production falls below your guarantee. CRC offers protection if prices rise or fall:

- In most years when the price usually declines as harvest approaches, you are guaranteed a pre-determined amount of income per acre
- In a year of rising prices, a production shortfall would be compensated at the higher market-based harvest price. This is critical if any lost production must be replaced at higher market prices to fulfill delivery on a forward contract.

Counties Available

Wheat CRC is available in most counties.

Causes of Loss

Adverse weather conditions¹
 Failure of irrigation water supply²
 Fire
 Harvest price is less than base price
 Insects³
 Plant disease³
 Wildlife

¹Natural perils such as hail, drought, and excess precipitation. ²If caused by an insured peril during the insurance period. ³But not damage due to insufficient or improper applications of control measures.

Insurance Period

Coverage begins when the wheat is planted and ends at the earliest of: (1) total destruction of the crop, (2) harvest of the crop, (3) abandonment of the crop, (4) final adjustment of a claim, (5) August 31 of the harvest year.

Reporting Requirements

Notify your agent within 72 hours of discovery of any damage to your wheat crop. If crop damage is first discovered during or within 15 days of harvest, notify your agent immediately and leave representative samples of the unharvested crop for inspection. The samples must be at least 10 feet wide and extend the entire length of the field. If you expect a revenue loss on the unit, give notice no later than 45 days after the harvest price is released.

Important Dates

Sales Closing	September 30, 2009
Final Planting Date ¹	October 10, 2009
Final Planting Date ²	October 20, 2009
Final Planting Date ³	October 31, 2009
Acreage Report Due	November 15, 2009
End of Insurance	August 31, 2010

¹Bradford, Cambria, Carbon, Clarion, Clearfield, Clinton, Jefferson, Lackawanna, Lycoming, Monroe, Potter, Tioga, Venango, Wayne, and Wyoming counties.

²Allegheny, Armstrong, Beaver, Bedford, Blair, Butler, Centre, Columbia, Crawford, Erie, Fayette, Fulton, Greene, Huntingdon, Indiana, Juniata, Lawrence, Luzerne, Mercer, Mifflin, Montour, Northumberland, Snyder, Somerset, Union, Washington, and Westmoreland counties.

³All other counties to the south and east of the above counties.

Definitions

Average APH Yield—Your average yield per acre based on your actual production history (APH), county yields, or other adjusted yields if appropriate.

Base Price—The price that determines your minimum guarantee and premium is based on the average daily price of Chicago Board of Trade (CBOT) July soft red winter wheat futures contracts during the period August 15 — September 14 of the year the crop is planted.

Coverage Level—You select a percentage (from 50 percent to 85 percent) that will be used to determine your minimum guarantee in dollars per acre.

Minimum Guarantee — The minimum number of dollars guaranteed per acre determined as follows:

Average APH yield X base price X coverage level.
 Example: 60 bushels per acre X \$8.58 X .75 =
 386 per acre minimum guarantee

Harvest Price — This price (at harvest time), used to determine harvest guarantee and calculated revenue, based on the average daily price of CBOT September soft red winter wheat futures contracts during July 15—August 14 of the harvest year.

Harvest Guarantee — Average APH yield X harvest price X coverage level
 Example: 60 bushels per acre X \$5.17 X .75 =
 \$233 per acre harvest guarantee

Calculated Revenue — Value of your actual wheat production determined as follows:
 Bushels of production X harvest price.
 Example: 20 bushels per acre produced X \$5.17 =
 \$103 per acre calculated revenue

(Note: The actual price you receive for selling your crop is **not** a factor in CRC calculations.)

Final Guarantee — The larger of the minimum or harvest guarantee.

(Note: Your premium will **not** increase if the final guarantee is higher than the minimum guarantee.)

Indemnity — Final guarantee – calculated revenue
 Example: \$386 – \$103 = \$283

Price Elections

Year	Base Price*	Harvest Price**
2010	\$5.29	\$**
2009	\$8.58	\$5.17
2008	\$5.93	\$7.93

* Available after September 14 each year.

** Available after August 14 of the harvest year.

Price elections are posted on the RMA Web site at:

Insurance Units

Insurable acreage is grouped into one or more units based on your selection of one of the following:

Basic Unit: A basic insurance unit includes all your wheat acreage in the county by share arrangement. Premiums are reduced 10 percent for basic units.

Optional Units: If qualified, you may further divide a basic unit into optional units by farm serial number or irrigated/non-irrigated land. The 10-percent basic unit premium discount will not apply.

Enterprise Unit: An enterprise unit combines all your wheat in the county into one county-wide unit, regardless of ownership, share, or rental arrangement. A premium discount will apply, based upon the number of insured acres. You must qualify for two or more basic/optional units to be eligible.

Loss Example

This example assumes an average yield of 60 bushels per acre, base price of \$8.58, harvest price of \$5.17, basic units, 75-percent coverage level.

60	Bushels per acre average APH yield
x .75	Coverage level
45	Bushels per acre guarantee basis
x 8.58	Base price per bushel
\$386	Minimum guarantee per acre

After the harvest price is announced in mid-August, a harvest guarantee will be calculated. The final guarantee becomes the higher of the minimum guarantee or the harvest guarantee.

\$233	Harvest guarantee per acre (45 bushels X \$5.17 harvest price)
\$386	Final guarantee per acre (higher of minimum or harvest guarantee)
– 103	Calculated revenue (20 bushels per acre produced X \$5.17 harvest price)
283	Indemnity per acre
– 11	Estimated premium per acre
\$272	Net indemnity per acre
