INFORMATIONAL MEMORANDUM

TO: Pacific Northwest Approved Insurance Providers

FROM: Dave P. Paul /S/ *Dave Paul*
Director

SUBJECT: 2013 Regional Underwriting Guidelines for Grafted Apples

BACKGROUND:

The 2013 FCIC 18010 Crop Insurance Handbook (CIH) Sections 7 D(4), 16 E and 16 I authorize the Risk Management Agency (RMA) Regional Office (RO) to issue Perennial Crop Underwriting Guidelines which waive forwarding of Perennial Crop Pre-Acceptance Inspection Reports (PAIRs) and Actual Production History (APH) databases for RMA RO yield determination.

CIH Section 16 E (1) identifies underwriting criteria which may trigger selection of a policy for a PAIR and submission to the RO for calculation of an RO Determined Yield. Specifically, CIH Sec. 16 D (4) (b) requires Approved Insurance Providers (AIP) to conduct PAIRs and requires them to forward the APH database to the RO for determined yield calculations when the insured has answered YES to the CIH questions in Sec. 16 D (4) (b) 1 or 2 of the Producer's Pre-Acceptance Worksheet (PAW). Identified within these questions are situations where damage has occurred or cultural practices have been performed (e.g., "grafting") that will reduce the insured crop productions from previous production levels.

Section 16 H (4) (a) further specifies that for crop acreage that has been modified by grafting, the month and year it was completed must be used to determine the applicable leaf-year (age) and Transitional Yields (T-Yield) (unless an alternative T-Yield and procedures for approving an RMA RO Determined Yield is provided on the actuarial documents or RMA RO Underwriting Guidelines).

The following Determined Yield calculations are provided for Grafted Apple acreage in Idaho, Oregon, and Washington.

The Risk Management Agency Administers
And Oversees All Programs Authorized Under
The Federal Crop Insurance Corporation

USDA is an Equal Opportunity Provider and Employer

INFORMATIONAL MEMORANDUM

ACTION:

For units (or blocks) with acreage that has been completely grafted a post grafting PAIR must be performed (and filed) if the grafting has been performed within the APH base period; however, submission of the PAIR and supporting documentation to the RO is not required, unless otherwise requested by the RMA RO.

NOTE: RMA RO Determined Yields are still required for acreage when only a portion of each tree is grafted.

A. ACTUARIAL DOCUMENTS COVERAGE AND RATES

The following percentages will be applied to the applicable T-Yield (as determined from the Actuarial Document) corresponding to the LEAF YEAR and SET OUT YEAR of initial planting of the grafted acreage:

Density (trees/acre)	1 st year after grafting	2 nd year after grafting	3 rd year after grafting	4 th year after grafting	5 th year after grafting #
0-299	0 %	30 %	60 %	90 %	100 %
300 & greater	10 %	50 %	70 %	100 %	100 %

Also applicable for succeeding leaf and set out years.

APH databases that have adjusted T-yields, per the procedures stated above, must be submitted to the Policy Acceptance Storage System (PASS) with Special Yield Descriptor F*, Yield Indicator F**, and Special Case yield Indicator R***

*Special Yield Descriptor “F”: CIH, Exhibit 13 F (2) (e)

** Yield indicator “F”: CIH, Exhibit 13 F (1)-(a)

***Special Case Yield indicator “R”: CIH, Exhibit 13 F (1) (b)

These adjusted T-yields will be validated by RMA once the year and month for both grafting and the original set out for the trees within the Unit (or Block) has been submitted to PASS.

EXAMPLES:

For a 10 acre apple orchard in Area 1 of Chelan County, Washington with a density of 360 trees per acre set out in April of 2006 and the policy crop year is 2013; the correct age and density from the Actuarial Document is determined as follows:

INFORMATIONAL MEMORANDUM

2013 Regional Underwriting Guidelines for Grafted Apples

2013 (leaf year) – 2006 (set out year) = 7 + 1 = 8

Age = 8 and Density = 360 Trees/Ac

Based on the age and density of the un-grafted acreage, the 2013 T-Yield as determined from the Actuarial Document is 905 Boxes per acres (see yellow highlight below):

T-Yield Selection Criteria		
Year: 2013	Commodity: Apples (0054)	State: Washington (53)
Data: Released	Plan: APH (90)	County: Chelan (007)

Types / Practices	
Type	Fresh 111
Practice	Irrigated 002
Type/Practice # (T/P #)	T/P 3
	Show Map (1)

Transitional Yields					
Year	Sub County	Density		Leaf Year	Box
		Low	High		
2013	001	300	599	7	760.00
				8	905.00
				9	1000.00

Grafted Acreage Example 1 – The entire 10 acres was grafted in May 2010.

- Prior APH history is maintained in a separate APH database documenting the previously insurable production from the pre-grafted acreage until it rolls out of the database (maintained for spot check purposes). [PASS 15 Record field 23 = 200604; Field 30 = 201005]
- A new APH database for the grafted acreage is started and it must meet policy minimum production requirements of 250 boxes per acre before it can be insured.

INFORMATIONAL MEMORANDUM

- Once the grafted acreage meets policy minimums, the APH database for the following year (1st year of insurance) will be a combination of one year actual and three years of T-Yield derived using the table on the Actuarial Document.

Grafted T-Yield = (Un-grafted T-Yield) 905 x (Grafting T-Yield Factor) .70 = 634

**New 2013 - APH Database
Unit 0001-0000BU**

	AC	PROD	YLD
2008	0.0		
2009	0.0		634 F*
2010	10.0		634 F*
2011	10.0	800	634 F*
2012	10.0	3800	<u>380 A</u> 2282

**Prior APH Database
Unit 0081-0000BU**

	AC	PROD	YLD
2008	10.0		750
2009	10.0	3000	300 A
2010	0.0		
2011	0.0		
2012	0.0		

2013 APPROVED YLD $2282 \div 4 = 571$ F**

Grafted Acreage Example 1.1 – For the subsequent crop year; exhibiting that ‘F’ yields (representing the adjusted T-yield for grafted acreage shown in Example 1 above) are not set in the database, but are updated according to the yearly components.

Updated 2014 - APH Database for Unit 0001-0000BU

Year	AC	PROD	YLD
2009	0.0		
2010	10.0		1000 F*
2011	10.0	800	1000 F*
2012	10.0	3800	380 A
2013	10.0	1500	150 A (if Hail then YA = 380) 2530 { $905 * 70\%$ (3 rd year after) * 60% }

APPROVED YLD $2530 \div 4 = 633$ F**
or with YA $2760 \div 4 = 690$ F**

Grafting Example 2 – Five out of ten acres were grafted in May of 2010; the age and density from the T-Yield Table for the un-grafted acreage on the Actuarial Document is as follows:

2013 (leaf year) – 2006 (set out year) = $7 + 1 = 8$

INFORMATIONAL MEMORANDUM

Age = 8 and Density = 360 Trees/Ac

Based on the age and density of the un-grafted acreage, the T-Yield as determined from the Actuarial Document is 905 Boxes per acre (see un-grafted determination above).

For the grafted five acres that were originally planted, instead of receiving a T-Yield based solely on the year the trees were grafted (i.e. four year old trees; 2013-2010 = 3 + 1 = 4), the grafted 5 acres receives an adjusted T-Yield using the alternative T-Yield table for grafted acreage which gives credit for the age and reserves of the rootstock, resulting in a T-yield of **634** as follows:

$$\text{Grafted T-Yield} = (\text{Un-grafted T-Yield}) 905 \times (\text{Grafting T-Yield Factor}) .70 = 634$$

2010	5.0	0	634 F*
2011	5.0	400	634 F*
2012	5.0	1900	<u>380 A</u>
			2282

New 2013 - APH Database			
<u>Unit 0001-0000BU</u>			
<u>Un-Grafted Acreage</u>			
(Block A)			
Year	AC	PROD	YLD
2008	10.0	750	----
2009	10.0	3000	300 A
2010	5.0	2250	450 A
2011	5.0	3125	625 A
2012	5.0	3700	<u>740 A</u>
			2115

$$\text{APPROVED YLD } 2282 \div 4 = 571 \text{ F**}$$

$$\text{APPROVED YLD } 2115 \div 4 = 529$$

If the insured fails to keep the grafted production records separate, the APH database is developed using standard procedures (i.e., total production ÷ total acres) and the year of grafting is used in determining the average set out year.

2013 - APH Database **Unit 0001-0000BU – Production from Grafted Acreage not kept separate**

	AC	PROD	YLD
2008	10.0	750	----

P15 field 23 = 200804; Field 30 = blank

[{(5ac x 2006) + (5 ac x 2010)} / 10ac = 2008]

B. AIP REPORTING:

1. Pre-Grafted APH Database

APH databases that are maintained to document pre-grafted production and acreage or uninsurable acreage are not required to be submitted to PASS.

2. Grafted APH Database

If less than 4 years of records have been provided (considering records provided from both before and after grafting), standard percent of variable T-Yield is applied to the grafted acreage T-Yield, CIH, Section 16 H (1) & (2).

3. APH Database PASS Submission

- a. The Special yield descriptor “F” identifies the T-Yield as an RO determined yield;
- b. RMA RO yield indicator F identifies the approved yield was based on RO Underwriting Guidelines; and
- c. Special case yield indicator R identifies productivity is reduced (FCIC Appendix III - Type 15 record, field 39).

Cups are not applicable, CIH, Exhibit F (1) (b) when special case yield indicator R is in effect.

- d. YA, however, may be exercised provided the adjusted yield (i.e. 60% of T-Yield) is developed according to these procedures for computation of a T-Yield specific for grafted acreage.

Please contact the Spokane Regional Office with any questions.
