RAINFALL INDEX

INSURANCE STANDARDS HANDBOOK

2009 and Succeeding Crop Years
THIS HANDBOOK CONTAINS THE OFFICIAL FCIC-APPROVED UNDERWRITING, ADMINISTRATION, AND LOSS ADJUSTMENT STANDARDS FOR THE RAINFALL INDEX CROPS FOR THE 2009 AND SUCCEEDING CROP YEARS. ALL APPROVED INSURANCE PROVIDERS (AIPs) MUST UTILIZE THESE STANDARDS.

SUMMARY OF CHANGES

The following list contains significant changes to this handbook, as determined by us. It may not represent all changes made. All changes made to this handbook are applicable regardless of whether or not listed.

Major Changes: See changes or additions in text which have been highlighted. Where entire Exhibits have been added, the title only is highlighted.

Changes for crop year 2009 (FCIC-18130) issued October 2008:

A. Page 24, Exhibit 4, “Determining Grid ID(s) and Use of the Website”: Added Exhibit 4 to the handbook for greater visibility and ease of access, as the correct Grid ID selection is essential for insurance coverage.

B. Page 35, Exhibit 5, “Rainfall Index – Pasture, Rangeland, Forage Example”: Added Exhibit 5 to the handbook for greater visibility and ease of access, as the correct Grid ID selection is essential for insurance coverage.

C. Added references to Exhibits 4 and 5 throughout the handbook, as appropriate.

1. INTRODUCTION

This handbook identifies the crop-specific procedural requirements for servicing the Rainfall Index (RI) Plan of Insurance in a uniform and timely manner.

A. The RI Plan of Insurance is designed as a risk management tool to insure against a decline in an index in a designated area called a grid, and it is primarily intended for use by those producers whose crop production tends to follow the average precipitation patterns for the grid. It is possible for the insured to have low crop production on the acreage that they insure and still not receive a payment under this plan. Because the program is designed for those producers whose crop production tends to follow the average precipitation patterns and not individual crop production, the insured should review the historical indices, additional tools, and information provided on the RMA Web site to determine if the program is suitable for their risk management needs.

B. An RI policy provides coverage from a reduction in the index.

C. This handbook and the applicable appendices, along with the RI Basic Provisions, applicable Crop Provisions and Special Provisions, provides needed information. Because of the broad scope of information covered by this handbook, references are made to other handbooks, procedures, or policies as appropriate.

D. This handbook contains exhibits and appendices with additional information for the RI plan of insurance. The appendices contain crop specific information and standards and other information. The exhibits and appendices include:

(1) Exhibit 1: RI Worksheet
(2) Exhibit 2: RI Policy Disclaimer
(3) Exhibit 3: Acreage Certification
(4) Exhibit 4: Determining Grid ID(s) and Use of the Website
(5) Exhibit 5: Rainfall Index – Pasture, Rangeland, Forage Example
(6) Appendix A: Pasture, Rangeland, Forage specific standards
(7) Appendix B: Apiculture specific standards
(8) Appendix C: FSA Decision on NAP

2. SPECIAL INSTRUCTIONS

This handbook remains in effect until superseded by re-issuance of either the entire handbook or selected portions (through slipsheets or bulletins). If slipsheets have been issued for a handbook, the original handbook as amended by slipsheet pages shall constitute the handbook. A bulletin can supersede either the original handbook or subsequent slipsheets.
A. **DISTRIBUTION**

The following is the minimum distribution of policy forms:

1. One legible copy to the insured.

2. The original and all remaining copies as instructed by the AIP.

It is the AIP’s responsibility to maintain original insurance documents relative to policyholder servicing as designated in their approved plan of operations.

B. **TERMS, ABBREVIATIONS, AND DEFINITIONS**

1. Terms, abbreviations, and definitions that are general (not crop specific) are identified in the CIH and LAM.

2. For ease in the administration of the terms of the RI-API policy and to avoid the duplication of documents, as used throughout the RI Basic Provisions and applicable handbooks and directives, the term “acre” is replaced by “colony;” “acres” and “acreage” are replaced by “colonies;” “acreage report” is replaced by “colony report;” and “acreage reporting date” is replaced by “colony reporting date” (i.e., Report of Acreage = Report of Colonies, acreage reporting date = colony reporting date, insured acres or acreage = insured colonies, etc.).

3. Terms, abbreviations, and definitions specific to RI policies and this handbook, which are not defined in the RI Basic Provisions, applicable Crop Provisions, or Special Provisions, are defined as they appear in the text.

4. Abbreviations:

   - **AIP** – Approved Insurance Provider
   - **APH** - Actual Production History
   - **API** – Apiculture
   - **CAT** - Catastrophic Risk Protection
   - **CIH** - Crop Insurance Handbook
   - **CP** – Crop Provisions
   - **FCIC** - Federal Crop Insurance Corporation
   - **LAM** - Loss Adjustment Manual
   - **MPCI** - Multiple Peril Crop Insurance
   - **NAP** – Noninsured Crop Disaster Assistance Program
   - **NOAA** - National Oceanographic and Atmospheric Administration
   - **PRF** – Pasture, Rangeland, Forage
   - **RI** – Rainfall Index
   - **RMA** - Risk Management Agency
SPOI  Special Provisions of Insurance  
SRA – Standard Reinsurance Agreement

For additional crop specific requirements, terms, conditions, and definitions, refer to the Appendices.

3. INSURANCE CONTRACT INFORMATION

A. GENERAL INFORMATION

RI plan of insurance coverage is based on the experience of the grid rather than individual farms. It indemnifies the insured in the event the "final grid index" falls below the insured's "trigger grid index". Requirements are contained in the RI Basic Provisions, and the applicable Crop Provisions.

B. ELIGIBILITY

An RI policy may be issued to a landlord and/or tenant, as well as an owner/operator, when the requirements of the RI Basic Provisions, Crop Provisions and Special Provisions, and this handbook are met.

C. INSURABILITY

The crops, types, and practices insured under this plan are those meeting the requirements of the RI Basic Provisions and applicable Crop Provisions and Special Provisions. The AIP must determine that the insured has complied with all policy provisions of the insurance contract. RI policy provisions which are to be considered in this determination include, but are not limited to:

(1) Application - The insured must submit to the AIP an application for each crop insured under the RI plan of insurance in accordance with the DSSH, including the Privacy Act and Nondiscrimination Statement, no later than the sales closing date specified in the Special Provisions.

(2) An acreage report must be filed annually with the AIP for each crop. The report must be on the AIP’s form adhering to form standards contained in the DSSH and filed each year by the acreage reporting date specified in the Special Provisions.

(3) RI policies are available ONLY in the states, counties, and grids listed in the county actuarial documents for the applicable crops.
(4) RI policies are continuous contracts unless canceled in writing by either the insured or the AIP by the cancellation date. Insureds requesting cancellation of an RI policy and/or transfer to another AIP must do so in writing by the dates specified in the RI Basic Provisions and applicable Crop Provisions.

(5) More than one RI policy offer (practice or type as listed for the crop in the actuarial documents for the county) may be available in a county for a crop. If more than one offer is available in a county, the insured must insure ALL of his/her acreage (unless specified in the applicable Crop Provisions) under the respective practice or type. However, if the applicant has two separate offers, they can insure one offer under the RI policy and not the other offer, if allowed by the applicable Crop Provisions.

If the applicant chooses to insure the offer under the RI policy, they cannot insure the same crop, type, and practice (as applicable) under any other FCIC subsidized program (except as noted in section 3C(6)(b) of this handbook, the applicable Crop Provisions, or the applicable Special Provisions), or obtain payment under certain other programs administered by the USDA, such as, but not limited to, the Conservation Reserve Program or NAP (except as provided in Appendix C). Refer to the RI Basic Provisions, applicable Crop Provisions and Special Provisions, and Appendix C for additional information.

If the acreage meets the requirements of different offers, the same acreage cannot be insured (during the same crop year) under the different offers. The insured must choose one offer under which to report and insure the acreage.

For additional crop specific requirements, refer to the Appendices.

(6) RI coverage consists of the following requirements:

(a) Coverage is to be provided in accordance with the terms of the RI Basic Provisions, applicable Crop Provisions and Special Provisions.

(b) Unless otherwise specifically allowed by the applicable Crop Provisions or Special Provisions, an insured producer CANNOT insure the same crop, type, and practice in the same crop year through any other federally subsidized crop insurance program in counties where they carry RI coverage. However, RI policyholders may insure the same crop, type, and practice in the same county and crop year under an Adjusted Gross Revenue (AGR) or AGR-Lite policy. If more than one policy has been written that covers the insured’s share of the crop, type, and practice, (except for AGR or AGR-Lite) the policy with the earliest application date will be in effect. All later policies will be void. Penalties may be applicable, as specified, in the provisions of 7 CFR Section 407.2.

(c) Review the applicable Crop Provisions for verification of whether CAT coverage is available.
(d) Protection is limited to the county base value per acre specified in the county actuarial documents for each crop, type, and practice (as applicable) multiplied by the maximum productivity factor, the maximum coverage level, and the insured share.

(e) The insured may select only one coverage level and productivity factor for each insured crop, type, and practice as applicable in the Crop Provisions. The resulting dollar amount of protection per acre will be applied to each grid ID and the applicable crop, type, and practice.

(f) The insured must report and certify, by the acreage reporting date, ALL insurable and insured acres of the crop, type, and practice in the county in which the insured has an interest, as specified in section 8 of the RI Basic Provisions, and applicable Crop Provisions.

The Acreage Certification can be completed by the insured on the acreage report in the remarks section, or by reviewing and signing Exhibit 3 of this handbook. The insured must certify in writing the requirements specified in section 8 of the RI Basic Provisions and applicable Crop Provisions.

(g) For the RI, indemnity payments are calculated independently on a unit basis and do not offset any other unit results.

(7) Acreage altered or removed as criteria for participation in any other government program is not insurable. A revised acreage report must be submitted removing the acreage, if such acreage was previously reported as insurable.

(8) Acreage on which the insured has failed to follow good farming/ranching practices, as defined in the RI Basic Provisions or applicable Crop Provisions for the insured crop will not be insured.

(9) **ALL** applicants are required to sign a disclaimer form at the time of application. Refer to the disclaimer form in Exhibit 2 of this handbook.

(10) The following coverage does NOT apply to RI coverage:

(a) Hail and fire exclusion provisions;
(b) High-risk land exclusion provisions;
(c) Late planting provisions;
(d) Replant requirements;
(e) Replanting payment provisions;
(f) Prevented planting provisions;
(g) Experience adjustment factors; or
(h) Optional units.
D. **COVERAGE AVAILABLE**

(1) RI coverage is expressed as a dollar amount of protection. The dollar amount of protection per acre will be the county base value per acre specified in the county actuarial documents for each crop, type, and practice (as applicable) multiplied by the coverage level and the productivity factor selected by the insured. The insured will have only one dollar amount of protection per acre for each county, crop, type, and practice as allowed by the applicable Crop Provisions.

(2) The expected grid index multiplied by the selected coverage level (contained in the actuarial documents or RI Reports) equals the insured's "trigger grid index" (expected grid index x coverage level (%) = trigger grid index).

(3) The expected grid index is established from the mean accumulated precipitation by index interval, calculated using NOAA’s Climate Prediction Center (CPC) historical 0.25 degree grid precipitation data, normalized and expressed as a percentage, such that the mean is 100.

(4) Premium rates are stated in dollars per one-hundred dollars of protection.

(5) The RI worksheet (Exhibit 1) may be copied for use as a resource in explaining the RI plan of insurance.

E. **YIELD HISTORY AND PRODUCTION RECORDS**

(1) Yield history and production records are not utilized in determining guarantees, losses, premiums, or indemnities. However, yield history and production records may be required for selected crops insured under the RI plan of insurance. Refer to the applicable Crop Provisions and appendices contained in this handbook.

(2) For policies that do not require yield history and production records, insureds are encouraged to maintain any individual crop production and acreage history for use, or possible future use, in a plan of insurance that uses APH yields for the same crop, e.g., APH Forage Production.

(3) If an RI insured returns to a different plan of insurance that uses APH yields for the same crop, types, and practices, their APH yield history database will be updated ONLY if continuous crop production records are available. APH procedures will apply and can be referenced in the CIH.

F. **ROUNDING RULES**

(1) Acres to value:
   a. PRF to tenths (XX.X); and
   b. API colonies to whole numbers (XX).

(2) Share and factors to thousandths (X.XXX);
(3) Dollars to dollars and cents (X.XX);
(4) Index Values to tenths (XXX.X); and
(5) Payment calculation factor to thousandths (X.XXX).

G. **PAYMENT CALCULATIONS**

(1) As previously detailed in 3 D (3), the expected grid index is 100.

(2) The final grid index for each grid is determined by FCIC based on NOAA, CPC’s current 0.25 degree grid precipitation data for each grid during the crop year, expressed as a percentage. As noted in the RI Basic Provisions, the insured may receive an indemnity payment if the final grid index falls below the insured’s trigger grid index. The payment is equal to the payment calculation factor multiplied by the policy protection per unit, as specified in the Crop Provisions. Refer to the applicable Crop Provisions or Exhibit 5 of this handbook for a detailed example of payment calculations.

(3) Any unpaid amounts due the AIP, arising from an RI policy or any other policy authorized under the Act, may be deducted from any indemnity payments due to the insured. Refer to the applicable Special Provisions for the appropriate billing dates.

H. **ADMINISTRATIVE FEE & PREMIUM DETERMINATION**

(1) In addition to the premium charged:

   (a) For catastrophic or additional coverage, as applicable, you must pay an administrative fee for each crop year for each crop in the amount specified in the applicable Special Provisions.

   (b) The administrative fee must be paid as specified in the RI Basic Provisions.

   Administrative fees may be waived for limited resource farmers.

(2) The annual premium is determined by applying the premium rate for each applicable county, grid ID, crop, type, practice, and coverage level selected based on the applicable Crop Provisions, Special Provisions, or actuarial documents, including any actuarial data reporting tools available on the RMA web site. Premium = (dollar amount of protection per acre x premium rate x number of acres x 0.01 x share), for each unit. Total policy premium will equal the sum of all the premiums calculated for each unit. Refer to the applicable Crop Provisions for a detailed example of premium calculations. The premium cannot be less than zero.

(3) The AIP will bill the insured for the total premium and administration fees, less the applicable subsidy. Premium and administrative fees shall be due and
payable 30 days after the billing date specified in the applicable Special Provisions.

(4) The insured may change the selected coverage level or productivity factor for subsequent years and notify the AIP in writing by the sales closing date for the applicable crop year.

4. UNDERWRITING

Policy documents for the RI plan of insurance contract consist of the following:

- Application;
- RI Basic Provisions;
- Applicable Crop Provisions; and
- Applicable Special Provisions.

A. FORMS AND PROCEDURES

The following forms are used to administer the RI plan of insurance and must adhere to the standards contained in the DSSH, unless otherwise specified in this handbook, including additional information requirements.

(1) **Special Report**: For required or additional information;

(2) **Application**: Refer to B and C of this section;

(3) **Contract Change Form**;

(4) **Disclaimer**: Refer to the RI Policy Disclaimer, Exhibit 2 of this handbook;

(5) **Policy Confirmation**;

(6) **Acreage Report**: Refer to D and E of this section for acreage report requirements, and F, G, and H of this section for review requirements;

(7) **Summary of Coverage**: Refer to I of this section;

(8) **Assignment of Indemnity**: Refer to the DSSH and CIH;

(9) **Transfer of Right to an Indemnity**: Refer to the DSSH and CIH;

(10) **Applicable Actuarial Documents (including any actuarial data reporting tools available on the RMA web site) and Special Provisions**: The actuarial documents, including actuarial data reporting tools and Special Provisions, contain county actuarial data that includes the following specific information:
expected grid(s) index; county base value; types, practices, index intervals; coverage level/trigger grid index; unsubsidized rates; and subsidy rates;

(11) **Power of Attorney**: Refer to the DSSH and CIH;

(12) **Notice of Indemnity Payment**: Refer to Section 5 for indemnity payment form requirements and notice of indemnity payment requirements;

(13) **Acreage Certification**: Refer to the Acreage Certification, Exhibit 3 of this handbook; and

(14) **RI Worksheet**: Refer to Exhibit 1 of this handbook for the worksheet and instructions.

**B. GENERAL APPLICATION REQUIREMENTS**

(1) **Sales Closing Dates**: Listed in the applicable Crop Provisions and Special Provisions.

Insured producers switching insurance coverage from another FCIC plan to an RI policy must provide a written cancellation for the other policy by the other crop’s cancellation date. A new application for insurance must be signed by the RI policy sales closing date. If the other policy for the same crop that will be insured under an RI policy is not canceled, the other coverage will remain in effect and the RI policy coverage will be void. Refer to the RI Basic Provisions, applicable Crop Provisions, and CIH for additional information.

(2) **Late-Filed Applications**: Accepted ONLY when there is documented evidence that the RMA Web site was unavailable on the sales closing date and the insured was unable to properly identify their grid, grid ID, or other requirements, as applicable. Coverage will attach, provided they signed an application and provided a report of their acreage with all available information as specified under section 8 of the RI Basic Provisions by the sales closing date. Upon the availability of the RMA Web site, the insured must select their grid ID, or other requirements as applicable and provide their completed report of acreage confirming all their insurable and insured acres, as outlined under section 8 of the RI Basis Provisions and the Report of Acreage section of the Crop Provisions, within 2 business days after the Web site becomes available.

(3) **Levels of Coverage**: 65 (CAT coverage, if available) 70, 75, 80, 85, or 90 percent. For RI policies, the insured may select any percentage of coverage shown on the applicable actuarial documents, including any actuarial data reporting tools available on the RMA web site, for each crop, type, and practice. Refer to the applicable Crop Provisions, Special Provisions, and RI Basic Provisions.
(4) **Eligible Counties:** Listed in the applicable Special Provisions. Multiple counties may be insured. County for the RI plan of insurance, as defined in the RI Basic Provisions, is also defined to include any acreage of the crop, type, and practice contained within a grid ID that crosses an adjoining county line where the acreage is contiguous. Refer to the RI Basic Provisions or applicable Crop Provision for the full definition.

For additional API requirements, refer to Appendix B.

(5) **Eligible Grids:** Listed in the actuarial documents. Multiple county grids may be insured. The applicant will determine a point of reference identifying the insured acres and the corresponding grid ID by the sales closing date for all insured acres. Points of reference must be determined using the maps contained on RMA’s Web site. Refer to Exhibits 4 and 5 for detailed instructions on determining the correct Point of Reference and Grid ID(s).

(a) A separate point of reference must be established for each crop, type, and practice in a grid as specified in the applicable Crop Provisions, as follows:

1. In the case of contiguous insured acreage that cross grids or county lines, a point of reference must be selected as follows:

   i) If the insured chooses to combine the contiguous acreages of the crop, type, and practice (as applicable) into one single grid ID or county, a single point of reference must be established for all of the contiguous acreage; or

   ii) If the insured chooses to separate the contiguous acreage of the crop, type, and practice (as applicable) into separate grid IDs or counties, they must establish the single point of reference for each grid ID or county. For example: If the contiguous acreage is located in four grids and they choose to insure the acreage in separate grids, the acreage can be separated into two, three, or four grids. If they select three grids, they must establish the points of reference, and report on the acreage report the grid ID, and the amount of insured acres located, or assigned as applicable, to each grid ID.

(6) **Insurable acres:** Only RI insurable acres as specified in the applicable Crop Provisions are insurable at the time of filing the acreage report. Insurable acres must be reported by county. Refer to the RI Basic Provisions, applicable Crop Provisions, and Special Provisions.

(7) **Insured acres:** The RI insured acres must equal all of insured’s insurable acres, unless otherwise specified in the applicable Crop Provisions. The amount of
insured acres in the county will not exceed 100 percent of the insured’s insurable acres of the crop in the county.

(a) For each grid, the insured must report the following, as applicable:
   1. Insured acres;
   2. Share;
   3. Practice;
   4. Type; and
   5. Grid ID.

(b) The same acres cannot be insured in more than one grid ID or county (except as noted in section 3-C(6)(b) of this handbook).

(c) The insured must certify on the acreage report, refer to Exhibit 3, Acreage Certification, of this handbook, that the:
   1. Point of reference used for each grid ID is identifying the insured acres covered under the RI Basic Provisions and applicable Crop Provisions subject to section 8(f) of RI Basic Provisions; and
   2. Acreage assigned to each grid ID is accurate to the best of their knowledge, subject to section 8 of the RI Basic Provisions.

(d) The grid ID for all insured acres will be included on the summary of coverage.

(e) Acreage associated with a grid ID in a county will be subject to the applicable actuarial documents. The county name(s) or county code(s) and grid number(s) must be shown on the application.

For additional crop specific requirements, refer to the Appendices.

(8) **Dollar Amount of Protection per Acre**: The county base value per acre specified in the actuarial documents for each crop, type, and practice (as applicable) is multiplied by the selected coverage level, and multiplied by the selected productivity factor (60% - 150%). The applicant will have only one dollar amount of protection per acre for each county, crop, type, and practice, as specified in the applicable Crop Provisions.

(9) **Policy Protection**: The maximum dollar amount the insured is eligible to receive, equal to the sum of all the insured’s policy protection per unit.

(10) **A Mandatory Disclaimer and Acreage Certification Form**: The agent and applicant must complete, sign, and date a disclaimer form and acreage certification when the RI insurance application is signed. Refer to Exhibit 2 and Exhibit 3 of this handbook.
C. **APPLICATION FORM REQUIREMENTS**

In addition to the requirements found in the DSSH, the RI application must contain:

1. **Dollar Amount of Protection per Acre**;
2. **Grid ID**; and
3. **Practice**: Three-digit code shown on the applicable Special Provisions.

D. **GENERAL ACREAGE REPORTING REQUIREMENTS**

1. AIPs must obtain an annual acreage report for each insured crop.
2. Acreage must be reported on forms meeting the standards contained in the DSSH. Any other crops insured under other FCIC plans of insurance must be reported separately.
3. Acreage report data must be timely and properly submitted by AIPs to FCIC as stated in the SRA.
4. Acreage reporting dates are stated in the applicable Special Provisions. If the acreage reporting date falls on a Saturday, Sunday, or legal holiday, the acreage reporting date will be extended to the next business day as provided in the RI Basic Provisions.
5. Late-filed acreage reports, initially received at the agent's office after the specified acreage reporting date, will be accepted or rejected in accordance with section 8 of the RI Basic Provisions.
6. Before the published acreage reporting date, corrected or revised acreage reports may be taken for any reason.
7. After the published acreage reporting date, a CORRECTED acreage report may be completed at the AIP's discretion and identified as "Corrected" if the correction affects the Summary of Coverage. Corrections are allowed only when there is an error, such as but not limited to: the information on the acreage report is clearly transposed (e.g., 87.0 written as 78.0).
8. After the published acreage reporting date, a REVISED acreage report must meet the criteria specified in section 8 of the RI Basic Provisions.
9. For an RI policy, it is the responsibility of the insured to report and certify the insurable and insured acres, as specified in the RI Basic Provisions, applicable Crop Provisions, and section 4 B (6) and (7) of this handbook.

For additional API requirements refer to Appendix B.
E. ACREAGE REPORT FORM REQUIREMENTS

In addition to the requirements found in the DSSH, acreage reports must also contain:

(1) Insurable Acres;

(2) Insured Acres;

(3) Insured Share: The insured's share expressed as a 3 place decimal. Differing RI insured shares, for the crop, type, and practice, as specified in the applicable Crop Provisions and Special Provisions, require separate acreage report line entries. ALL ACREAGE OF THE CROP WITH THE SAME SHARE, TYPE, GRID, AND PRACTICE, REGARDLESS OF NAME OF OTHER PERSON(S) SHARING IN THE CROP, CAN BE ENTERED ON A SINGLE LINE OF THE REPORT.

For the reporting of share of the spouse and dependent children, refer to the RI Basic Provisions;

(4) Grid ID;

(5) Practice: A practice code as listed in the applicable Special Provisions for each line for all insured acres for which a practice is specified. Record as a three digit number; e.g., practice code “232;”

(6) Unit Number: Record as a five-digit number. There is no basic unit discount and optional units are not applicable; and

(7) Productivity Factor: Record the percentage as a 2 place decimal format, e.g. 125% reported as 1.25.

AIPs may utilize unused columns of their acreage report form to accommodate required entries.

For additional crop specific requirements, refer to the Appendices.

F. ACREAGE REPORT REVIEW SELECTION

AIPs must perform acreage report reviews no later than 120-days after the acreage reporting date for the crop, as listed in the Special Provisions, or after a reduction in acreage, as specified in section 8 of the RI Basic Provisions. Acreage report reviews are required for:

(1) All policies of employees, representatives, adjusters, agents, etc., of either an AIP or the FCIC on which a claim has been paid in the last year;
(2) All policies for which misrepresentation or concealment of material facts are suspected;

(3) All policies for which a written application for acreage reduction was completed during the crop year; and

(4) Not less than a three percent random sample of all RI policies with reported acreage. Where policies have been selected that have multiple RI crops, or other area wide plans, the reviewer may verify the acreage report information for the other crops. Such verifications will apply toward the required reviews for that company for those crops, even though such reviews were not random.

G. ACREAGE REPORT REVIEW CRITERIA

Acreage report reviews verify:

(1) Total insurable acres versus insured acres for each crop, type, and practice, as applicable in the county; and,

(2) Insurable share in the crop.

Actual field inspections are required on all policies for which misrepresentation or concealment of material facts is suspected.

For additional crop specific requirements, refer to the Appendices.

H. ACREAGE REPORT REVIEW SUMMARY

Thirty days prior to the end date of the last index interval for the crop year, as specified in the applicable Special Provisions, the AIP must submit a report (Type 57 record) of its completed RI acreage report reviews, for each crop. Policies are considered to be within tolerance if the premium and indemnity discrepancy is less than $250. The report summary will identify all unit discrepancies discovered, if the policy tolerance is exceeded.

I. SUMMARY OF COVERAGE REQUIREMENTS

In addition to the requirements found in the DSSH, the following will also be provided:

(1) Insurable Acres;

(2) Insured Acres;

(3) Insured's Share;

(4) Grid ID;
(5) Practice;
(6) Trigger Grid Index;
(7) Protection per Acre: Gross (before share);
(8) Policy Protection per Unit: Net (after share);
(9) Policy Protection: Net (after share); and
(10) Premium: Net (after share).

5. INDEMNITY

A. GENERAL INDEMNITY PAYMENT FORM REQUIREMENTS

There are no field claim activities (e.g., loss adjustment) for RI policies. RI policies have the following general requirements:

(1) Indemnity payments must be paid according to the RI Basic Provisions and applicable Crop Provisions, using the final grid index(es) released by FCIC and the insured's trigger grid index.

(2) Indemnity payments shall be calculated separately for each unit, as specified in the applicable Crop Provisions.

(3) AIPs must make any indemnity payments not later than 60 days after receiving the RI final grid index from FCIC for the grid id.

B. NOTICE OF INDEMNITY PAYMENT REQUIREMENTS

The AIP will acknowledge each indemnity payment with a "notice of indemnity payment" for each indemnified insured unit. This notice must contain AT LEAST the following:

(1) Insured's Name and Address: Insured’s complete name and address as shown on the application;

(2) AIP’s Name;

(3) Agent/Agency Name: Servicing agent’s or agency’s complete name, address, and phone number;

(4) Contract/Policy Number: Insured’s assigned policy number;
(5) **Crop**: Crop name as listed in the county actuarial documents;

(6) **Crop Year**: Appropriate four-digit year, such as "YYYY," as defined in the policy;

(7) **Insured’s Share**;

(8) **Coverage Level**;

(9) **Type**;

(10) **Grid ID**;

(11) **Practice**;

(12) **Unit Number**;

(13) **Dollar Amount of Protection per Acre**;

(14) **Final Grid Index**;

(15) **Trigger Grid Index**;

(16) **Indemnity**: Total RI policy indemnity payment, in whole dollars, for the insured crop in the county, for each unit;

(17) **Final Payment**: Final indemnity payment in whole dollars for all RI policy crops, by unit. This entry is to reflect any reduction for any amount due the company; and

(18) **Check Number and Date**: Actual check number with date of issue; e.g., MM/DD/YYYY.

Prepared by: ____________________________ (Agent's Signature)  Insured's Initials: _______________

OCTOBER 2008  18  FCIC-18130 (RI)
RI Worksheet Completion Procedures

A. GENERAL INFORMATION

(1) The RI Worksheet is provided to assist the agent in determining the insured’s policy protection and premium.

(2) To assist the agent, a separate worksheet should be completed for each county, crop, and type insured, as applicable.

(3) For API policies, the agent and insured will substitute “colonies” for “acres” as directed by the API Crop Provisions.

B. WORKSHEET ENTRIES AND COMPLETION INFORMATION

Verify or make the following entries:

<table>
<thead>
<tr>
<th>Item No.</th>
<th>Information Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Insured’s Name: Enter the name of the insured that identifies the person (legal entity) to whom the policy is issued.</td>
</tr>
<tr>
<td>2.</td>
<td>Date: Enter the date the form was completed (MM/DD/YYYY).</td>
</tr>
<tr>
<td>3.</td>
<td>State: Enter the state in which insurance attaches and the corresponding 2-digit state code.</td>
</tr>
<tr>
<td>4.</td>
<td>County: Enter the county in which insurance attaches and the corresponding 3-digit county code.</td>
</tr>
</tbody>
</table>

Note: The RI Worksheet is provided for acreage in one county. For multiple counties, use separate worksheets.

5. Type: Enter the type if there are different types available (refer to the applicable Crop Provisions) for the crop. If the insured elects to insure more than one type, a separate worksheet should be completed for each type.

6. Coverage Level (or Trigger Grid Index): Enter the selected coverage level [65 (CAT), 70, 75, 80, 85, or 90 percent] as specified in the applicable Crop Provisions. The level of coverage selected by the applicant will be applied to each unit (as defined by the applicable Crop Provisions).

The coverage level and the trigger grid index are the same value. [For example: 75% (coverage level) x 100 (expected grid index) = 75 (trigger grid index)].
7. **Productivity Factor:** Enter the selected productivity factor (a percentage value between 60 and 150 percent, selected in one percent increments).

8. **Dollar Amount of Protection per Acre:** As specified in the RI Basic Provisions:

Example: county base value x coverage level (#6) x productivity factor (#7) [$20.00 x 90% x 120% = $21.60].

9. **Insurable Acres:** Enter the amount of Insurable acres in the county for the type, as applicable.

10. **Total insurable colonies (United States):** FOR API POLICIES ONLY, enter the TOTAL number of colonies in which you have a share in the United States.

11. **Grid ID (s):** Enter the specific grid number(s) corresponding to the insured acres in the specified county.

12. **Insured Acres:** Enter the number of insured acres for each grid ID. Total the column numbers in 12a.

13. **Share:** Enter the applicable share, as a percentage, as applicable.

14. **Practice (Index Interval):** FOR PRF AND API POLICIES ONLY, Enter the code(s) associated with each practice (Index Interval).

15. **Unit Number:** Assign a unit number for each crop, type, practice and share, as applicable, for each grid ID.

16. **Percentage of Insured Acres per Unit (by Practice):** FOR PRF AND API POLICIES ONLY, Designate a percentage of the insured acres to at least two practices, as specified in the applicable Special Provisions. The sum of all the percentages (entered in the cell labeled “Total” and colored red) for each grid ID, and share must equal 100%.

17. **Amount of Insured Acres per Unit (by Practice):** FOR PRF AND API POLICIES ONLY, for each practice (index interval), Column 16 x Column 12 for the corresponding rows and item.

The total insured acres for each grid ID (entered in the cell labeled “Total”: and colored red) should equal the number in 12 for each grid. Also, total the column numbers in 17a, should equal the value in 12a.

18. **Policy Protection per Unit:** FOR PRF AND API POLICIES ONLY, the result of Item #8 x Column 17 x Column 13, for the corresponding row items.

**The Policy Protection** – record in 18a the sum of column 18.
19. **Premium Rate/ $100 of insurance:** Enter the premium rate for each grid ID, type, and practice, as applicable.

20. **Premium per Unit:** Column 17 \( \times \) Column 19 \( \times \) 0.01 (adjustment factor) \( \times \) Column 13, for each corresponding row item.

   **Total Policy Premium** – record in 20a the sum of column 20.

21. **Premium Subsidy per Unit:** Column 20 \( \times \) the applicable subsidy percentage.

   **Total Premium Subsidy** – record in 21a the sum of column 21.

22. **Producer Premium per Unit:** Column 20 minus Column 21, for each corresponding row item.

   **Total Producer Premium** – record in 22a the sum of column 22.
Exhibit 2: Rainfall Index Policy Disclaimer

YOU NEED TO UNDERSTAND THE FOLLOWING:

- **The Rainfall Index is not a plan of insurance against individual loss. The terms and conditions of this plan are different from those of an Actual Production History plan of Multiple Peril Crop Insurance.**

- **Final payment will be made according to the applicable crop provisions. Premium will be due 30 days after the billing date specified in the actuarial documents.**

- **This plan of insurance is designed as a risk management tool to insure against a decline in an index for a designated area called a grid, and it is primarily intended for use by those producers whose crop production and precipitation tends to follow the average precipitation patterns for the grid. It is possible for you to have low crop production or low precipitation on the acreage that you insure and still not receive a payment under this plan. This program is based upon grid indices, not individual farm yields, or precipitation totals. The only insurable cause of loss under this policy is having a Final Grid Index less than your Trigger Grid Index. Because the program is designed for the producers whose crop production and precipitation tends to follow the average precipitation patterns for the grid **AND NOT INDIVIDUAL CROP PRODUCTION**, you should review the historical indices, additional tools, and information provided on the RMA Web site to determine if the program is suitable for your risk management needs.**

- **You should continue to maintain any and all of your production records in the event you wish to purchase an Actual Production History plan of Multiple Peril Crop Insurance in future years.**

I understand the terms of the Common Rainfall Index Policy Basic Provisions and applicable Crop Provisions. I am aware that I cannot obtain another plan of insurance in a county, if available, on crops insured under the RI plan of insurance with the exception of AGR and AGR Lite (if available), or in accordance with the Special Provisions. I am aware of the additional tools provided by RMA on their Web site related to the RI plans of insurance to assist me in determining if the RI plan of insurance is suitable for my farming operation. I have read and fully understand this Rainfall Index Disclaimer.

Exhibit 4: Determining Grid ID(s) and Use of the Website

Introduction

As stated in the Rainfall Index Common Policy provisions and applicable crop provisions, a Grid ID is a specific code associated with each grid, contained in the actuarial documents. A Grid ID is determined based on a point of reference selected by you, which must be established by the sales closing date. Because a grid is approximately 12 miles by 12 miles in size, RMA has provided a web-based tool accessible on RMA’s website, [http://www.rma.usda.gov](http://www.rma.usda.gov) or a successor website, as a method to accurately identify the applicable Grid ID(s) for the insured’s acreage. This Website is the official Website which will be used for any compliance related issues or final determinations that may be required.

The tool has been developed as an interactive website that a user can navigate through to various screens to collect information and establish a Grid ID. The tool will also allow a provider/agent to print any of the screens that appear on the site. It is recommended that when an insured selects a point of reference from the website, a printed copy (select the print option on the page) of the screen with the map and corresponding point of reference (which contains state, county, grid, longitude, latitude, and other information related to location), should be placed in the file, for verification purposes. Additional details on these and other tools are provided in this Exhibit.

Because of the broad scope of information covered by this handbook, the information provided in this Exhibit provides additional clarification and requirements specific to the RI plan of insurance. The information provided in this Exhibit does not affect the construction or meaning of any of the policy provisions.

Locating the Website

Locating and using the website can be completed at any location that has web access. The speed of the display on each screen is determined by each individual computer’s speed and the internet connection capabilities. The tools available for the Rainfall Index are located at the Rainfall/Vegetation Indices gateway page, [http://www.rma.usda.gov/policies/ri-vi](http://www.rma.usda.gov/policies/ri-vi), or a successor website.

Navigating the Website

The first and one of the most important steps is to accurately identify the Grid ID(s). A direct link to RMA’s web-based tool is available on the specific crop page under the Rainfall/Vegetation Indices gateway page. The web address for the RI-PRF tool is [http://prfri-rma-map.tamu.edu](http://prfri-rma-map.tamu.edu). This link brings you to the default page for the map driven Grid ID locator for the Rainfall Index pilot programs for Pasture, Rangeland, Forage. The Apiculture Rainfall Index map driven Grid ID locator tool can be found at [http://api-ri-rma.tamu.edu/map](http://api-ri-rma.tamu.edu/map).

The following information provides additional details based on the design of the PRF websites. There are differences in the views between the PRF and API websites; however, the basic principles and steps remain the same.
An example of a default PRF screen is displayed, which is the topo map:

**Figure 1. Establish Reference Point and Grid ID Default Page, topo Map**

### Description of the PRF Screen

The middle of the screen displays the topo map (Figure 1). The map size can be changed by clicking on the “Small”, “Medium”, “Large”, or “Extra Large” link located directly above the map. For purposes of these directions, a small map is displayed.

Within the map, the red ‘+’ represents the current location and the point where information is collected. Above the map, the state and county of the red ‘+’ is listed. In addition, the latitude and longitude coordinates and the Rainfall Grid ID’s are provided.

The goal is to position the red ‘+’ over the location of the insured’s acreage, also known as the point of reference. As defined in the policy, a point of reference is: 

“A method of identifying and documenting the location of the insured acreage and the associated grid ID, as provided on the acreage report, and covered under these Basic Provisions”.

The red ‘+’ can be moved by either clicking on the map or by clicking on the N, S, E, or W arrow buttons located around the perimeter of the map. To the right of the map, the resolution of the map can be increased or decreased. By increasing the resolution, or clicking on a smaller number, the map will zoom to a more exact location. Decreasing the resolution will expand the map, including a larger area.
Directly overlaying the map, square grids, outlined by a blue line, give an approximate visual representation of where the Grid IDs are located. For instance, on the default map shown, the red ‘+’ is located just inside of Grid ID #37733. The Grid ID where the red ‘+’ is located can be confirmed by looking above the map where the Rainfall Grid ID is listed.

The map can be printed at any time by clicking the “Print Map” icon located on the screens. It is recommended that a map be printed with each point of reference on an insured policy for verification purposes.

**PRF Menu Options**

Along the left side of the screen, there is a list of menu options similar to those illustrated below. The options and their descriptions are as follows:

<table>
<thead>
<tr>
<th>Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Set Layer to Topo Map</td>
</tr>
<tr>
<td>2. Type in nearest town</td>
</tr>
<tr>
<td>3. Click FIND</td>
</tr>
<tr>
<td>4. View site list</td>
</tr>
<tr>
<td>5. Click site to view</td>
</tr>
<tr>
<td>6. Navigate to property</td>
</tr>
<tr>
<td>7. Switch layer to Photo</td>
</tr>
<tr>
<td>8. Navigate to point</td>
</tr>
<tr>
<td>9. Print view for records</td>
</tr>
<tr>
<td>10. Note Grid ID</td>
</tr>
</tbody>
</table>

Lists the ten basic steps to determine the Grid ID. Conveniently located on the screen at all times.

Type a city name and click FIND

City: College Station

Possible matches. Click to view

1. College Station, Arkansas
2. College Station, Texas
3. College Station, Florida

Select the type of map below

Layer: 1974 Topo

View data at this location

- Lookup Grid ID Using Lat/Lon
- Decision Support Tool
- View Historical Rainfall Indices
- View Rates/Values
- RMA Premium Calculator

Click the link below to return

Return to RMA

Search function of a nearby city to the insured acreage. After the city or county is typed in, click “Find”.

If more than one city is returned, a list of possible matches is given. Click on the correct city and state combination link to view the correct map.

Shows the type of map being displayed. In the drop down box (found by clicking on the gray arrow) the map type can be changed to topo or photo. It is usually easier to begin with a topo Map.

This section on the page will provide access to additional data sets available for the PRFRI insurance program. To access the data, click on the link.

**The Photo Map (Layer)**

As previously mentioned, there are two map types available to assist the applicant in locating their property. The first type, the topo map, was previously displayed. The second type, the photo map, displays details that can help the applicant identify landmarks on their property. As
with the topo map, the grid boundaries are identified with a blue line and the Grid ID’s are identified on the map in yellow. The point of reference is shown with a yellow ‘+’. Again the map can be resized to assist in the viewing and the locations of the gridlines. Grid lines are displayed on the API maps; however the grid information is displayed on the screen and not the map.

Figure 2. Photo Map Example

Locating the Insured’s Acreage – Basic Steps

This section lists the Basic Steps of how to find the location of insured’s acreage by using the program’s website. These steps will help to determine if the acreage is contained in a single grid or crosses over into more than one grid. An individual applicant may have more than one acreage location and will need to go through the steps for each location. A Grid ID must be selected for each location that is insured. This information will assist the insured in determining how many Grid IDs will be needed.

Step 1  Type in the city and/or county name where the property is located (if no response is provided for the selected city, select a larger city near the property).

Step 2  Select the city or county from the possible matches available on the display. By clicking on the link, a topo map for the area will be displayed.
Step 3 Narrow the search by selecting an area close to where the property to be insured is actually located. The area can be narrowed by either clicking on the map or clicking on the N, W, S, or E arrows located around the perimeters of the screen. The area can be refined even further by increasing the resolution of the map.

Step 4 It is recommended that once the applicant has located the general area where the property is located, that they continue to refine the search by switching to the photo maps.

Step 5 Using the topo map, photo map, or combination of both, the applicant needs to choose an appropriate size of view that allows for proper identification of the property boundaries and the corresponding Grid ID(s).

If an insured wishes to determine the location of acreage and Grid ID(s) by utilizing Latitude and Longitude, click on the link under Rainfall Index which reads Grid ID Locator - Longitude/Latitude Lookup. Once the link is selected follow the on-screen options. It is important to point out that the Latitude and Longitude must be recorded in the format specified to accurately determine the Point of Reference. Latitude and Longitude must be selected for each location that is insured.

Determining the Grid ID(s) – Specific Guidelines

By using the steps previously outlined, the applicant should be able to locate their acreage and corresponding Grid IDs on the map. This section discusses the specific guidelines in selecting appropriate Grid ID(s).

When selecting a Grid ID, several options are available to the applicant, depending on their circumstances and the location of their acreage. Therefore, go to the section that best represents the property or the mixture of properties. The table below is a quick reference on the insured’s grid options and gives information on which section to refer to below for additional information.

<table>
<thead>
<tr>
<th>Type of Acreage</th>
<th>Grid Information</th>

</tr>
<tr>
<td></td>
<td>Combined</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Contiguous Acreage</td>
<td>Multiple Grids –</td>
<td>Choose one point of reference</td>
<td>A (3) Contiguous Acreage – Multiple Grids (Separated)</td>
</tr>
<tr>
<td></td>
<td>Separated</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Non-Contiguous Acreage</td>
<td>(multiple properties)</td>
<td>Choose one point of reference for each, separate, non-contiguous acreage in the county</td>
<td>B Non-Contiguous Acreage</td>
</tr>
</tbody>
</table>

It is also important to note that the same acres cannot be insured in more than one Grid ID or county and the amount of insured acreage will not exceed 100 percent of the insurable acreage of the crop in the county.
A. Determining the Grid ID(s) for Contiguous Acreage

Contiguous Acreage is defined as: “Acreage of an insured crop owned by you, or rented by you for cash or crop share, in a county or grid that continues into an adjoining state, county or grid without interruption. Acreage separated by only a public or private right-of-way, waterway, or an irrigation canal will be considered contiguous."

Contiguous acreage may all be contained in one Grid ID, or may spread into more than one Grid ID and/or county. If the acreage crosses into more than one grid and/or county, all contiguous acreage of the crop type may be combined into a single Grid ID using one point of reference for all of the acreage, including acreage that extends into an adjoining numbered grid or county. Or, the insured may chose to separate the insured acreage into separately numbered Grid IDs where the acreage is located.

1. Contiguous Acreage – One Grid

If the insured’s acreage is contiguous and located entirely within one state, grid and county, use the five Basic Steps previously listed to locate the insured’s acreage and conduct the following steps:

Step 6 The insured must then pick one point of reference on the property by moving the red (or yellow, depending on the type of map being viewed) ‘+’ to that location. The Rainfall Grid ID listed at the top of the screen (and on the map itself) will be the Grid ID used in the policy.

Step 7 Click on the Print Icon on the screen and print the map. This map will be used as a record to verify the Grid ID. Once printed the property boundary can also be outlined and initialed by the insured for verification purposes.

Step 8 The insured must certify that the point of reference used for each grid ID is identifying the insured acres covered under the RI Basic Provisions and the applicable Crop Provisions.

For example, as shown in Figure 3, the Insured’s Acreage is contiguous and located entirely in Grid 1. Therefore, the point of reference is chosen on the property and Grid 1 will be the only Grid ID used in the policy.
(2) Contiguous Acreage – Multiple Grids (Combined)

If the insured’s acreage is contiguous and crosses into more than one grid and/or county, the insured has the option to **combine** the grids and/or counties and choose **one** reference point for the entire contiguous acreage. Use the five Basic Steps listed above to find the insured’s acreage and add the following steps:

**Step 6**  
The insured must then pick **one** point of reference in the contiguous acreage by moving the red + to that location. The Rainfall Grid ID listed at the top of the screen (and in yellow on the map itself) will be the Grid ID used in the policy.

**Step 7**  
Click on the Print Icon on the screen and print the map. This map will be used as a record to verify the Grid ID. Once printed the property boundary can also be outlined and initialed by the insured for verification purposes.

**Step 8**  
The insured must certify that the point of reference used for each grid ID is identifying the insured acres covered under the RI Basic Provisions and the applicable Crop Provisions.

For example, in Figure 4 below, the insured’s acreage is located in Grid 1 and Grid 2. The insured chose to combine the acreage; therefore, they will choose one point of reference for all of their acreage in both Grid 1 and Grid 2. In this example, the point of reference is in Grid 1, therefore Grid 1 will be the only Grid ID used in the policy.
(3) Contiguous Acreage – Multiple Grids (Separated)

If the insured’s acreage is contiguous and crosses into more than one grid and/or county, the insured can choose a point of reference for each grid and/or county and separate the acreage by Grid ID and/or county. If the insured chooses to separate the acreage into separate numbered Grid IDs, one point of reference will be selected in each Grid ID. Each Grid ID would be insured as a separate unit. If acreage is separated into a different county, a new policy for an additional county must be written.

Use the five Basic Steps previously listed to locate the insured’s acreage and add the following steps:

Step 6  The insured must then pick one point of reference in each Grid by moving the red ‘+’ to that location. The Rainfall Grid ID listed at the top of the screen (and in yellow on the map itself) will be the Grid ID used in the policy.

Step 7  Click on the Print Icon on the screen and print the map. This map will be used as a record to verify the Grid ID. Once printed the property boundary can also be outlined and initialed by the insured for verification purposes.

Step 8  The insured must certify that the point of reference used for each grid ID is identifying the insured acres covered under the RI Basic Provisions and the applicable Crop Provisions.

Step 9  The insured must certify that the acreage assigned to each grid ID is accurate to the best of their knowledge.

Steps 6 through 9 must be repeated for each grid that will be insured separately. If acreage is separated into a different county, a new policy for an additional county must be written.
For example, in Figure 5, the insured’s acreage is located in Grid 1 and Grid 2. The insured chose to separate the acreage by Grid ID; therefore, choosing a point of reference in Grid 1 and a point of reference in Grid 2. In this example, the insured would certify and assign that there is approximately 35 acres in Grid 1 and 15 acres in Grid 2.

Figure 5. Contiguous Acreage - Multiple Grids (Separated)

B. Determining the Grid ID(s) for Non-Contiguous Acreage

A point of reference must be selected for each separate, non-contiguous insured acreage of the crop that is located in the county. The steps in determining the point of reference are similar to the steps outlined for contiguous acreage, depending on whether or not the acreage crosses grid and/or county lines, and is repeated for each non-contiguous acreage area to be insured.

For example, in Figure 6, the insured has two separate acreage locations in two grids. The insured would have to pick a point of reference in Grid 1 and a point of reference in Grid 4 and insure the two properties separately.

Figure 6. Non-contiguous Acreage Located in Separate Grids
In Figure 7, the insured has two separate acreage locations in three grids. First, the insured would have to select a point of reference in Grid 4. Similar to the contiguous acreage guidelines, the insured then has the option of combining the acreage in Grid 1 and Grid 2, or insuring them separately by grid. Therefore, depending on the insured, there may be 2 or 3 Grid ID’s in this scenario.

Figure 7. Non-contiguous Acreage in Different Grids

As illustrated in Figure 8, if the non-contiguous acreage is located in the same grid, the non-contiguous acreage will be combined and given a single Grid ID; however as the policy states the insured acreage must be documented (Point of Reference - A method of identifying and documenting the location of the insured acreage and the associated grid ID, as provided on the acreage report, and covered under these Basic Provisions).

Figure 8. Non-contiguous Acreage in the Same Grid
Other Links on the Website

In addition to the link described above, there are additional links on the Pasture, Rangeland, Forage and Apiculture web pages that are useful to the applicant. When these additional links are selected the insured will be able to view other options and data related to the RI-PRF and RI-API Pilot Programs. Once a link is selected, follow the on line options to view the information desired.
Exhibit 5: Rainfall Index - Pasture, Rangeland, Forage Example

Introduction

The first half of this example walks a producer, Joe Rancher, through the basic information needed at the time of sign up/application. The second half of this example illustrates how the indemnity will be calculated at the time of loss. The same steps are applicable to the Apiculture Rainfall Index program. The below steps are also followed for Apiculture with the producer selecting the acreage upon which colonies will be located.

At the time of application

Acreage and Grid Information

Joe Rancher has 645 acres of insurable grazingland and hayland in two counties in Texas. His insurable acreage is contained in five non-contiguous properties: A, B, C, D, and E.
A = grazingland (100% share)
B = grazingland (100% share)
C = grazingland and hayland (50% share)
D = grazingland (100% share)
E = grazingland (100% share)

Using the website, Joe Rancher locates his property and the corresponding grids (For information on locating the grids and using the website, see Exhibit 4 of this handbook). His properties are illustrated below in Figure 9.
Joe Rancher decides to insure the four properties (535 insurable acres) located in County B (Andrews County) and leave property A uninsured in County A. Had he chosen to insure Property A in County A, he would have had to insure that acreage separately because Property A is non-contiguous from his other properties and located in a different county.

For his properties in County B, he has a couple of options in dividing his property among the four Grid IDs.

**Property B – Contiguous acreage spread into more than one grid (grazingland with 100% share)**

Since the insurable acreage spreads into Grid 1 and Grid 2, all contiguous acreage of the crop type may be combined into a single Grid ID using one point of reference for all of the acreage. Or, Joe Rancher may choose to separate the insured acreage into separate numbered Grid IDs in which the acreage is located.

**Decision:**

Joe Rancher decides to separate the property into two Grid IDs, with 100 insured acres in Grid 1 and 50 insured acreage in Grid 2. He picks a reference point in each Grid ID, certifies the point of reference is identifying the insured acreage in the grid, and certifies the approximate amount of insured acreage in each grid.

**Property C – Contiguous acreage spread into more than one county, which contains two crop types (both grazingland and hayland with 50% share)**

Since the insurable acreage spreads into County A and County B, all contiguous acreage of the crop type may be combined into a single county (and Grid ID) using one point of reference for all of the acreage. Or, Joe Rancher may choose to separate the insured acreage by county in which the acreage is located. Of the 140 insurable acres in this property 100 acres is grazingland and 40 acres is hayland.

**Decision:**

Joe Rancher decides to pick a point of reference in County B and use that point of reference to represent all the contiguous insurable grazingland acreage (100 acres) in both County A and County B. He certifies the point of reference is identifying the insured acreage in the grid.

If Joe Rancher decides to insure his hayland acres (40 acres) he would follow the same steps for hayland, by selecting a point of reference in Grid 3 and depending on the point of reference the hayland would be insured in either County A or County B. Joe Rancher would also need to make all the decisions needed to complete the worksheet for his hayland acres.

**Property D and E – Non-Contiguous acreage located in a single grid (both grazingland with 100% share)**

Since properties D and E are both located in Grid ID 4, the acreage are combined and insured as a single unit, even though they are non-contiguous and a point of reference identifies both insured acreages.
Decision:

Joe Rancher identifies Properties D and E and insures all 245 acres under Grid ID 4. He picks a reference point and certifies that it is identifying the insured acreage in the grid.

To recap, the following are the Grid IDs, the properties located in each, and acreage insured for grazingland:

<table>
<thead>
<tr>
<th>Grid ID</th>
<th>Property</th>
<th>Insured Acreage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grid 1 (insert the actual Grid ID number for the insured, i.e. 37881)</td>
<td>B</td>
<td>100</td>
</tr>
<tr>
<td>Grid 2 (insert the actual Grid ID number for the insured, i.e. 37882)</td>
<td>B</td>
<td>50</td>
</tr>
<tr>
<td>Grid 3 (insert the actual Grid ID number for the insured, i.e. 38773)</td>
<td>C</td>
<td>100</td>
</tr>
<tr>
<td>Grid 4 (insert the actual Grid ID number for the insured, i.e. 38774)</td>
<td>D &amp; E</td>
<td>245</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td></td>
<td><strong>495</strong></td>
</tr>
</tbody>
</table>

Protection

Coverage Level
Joe Rancher chooses a coverage level of 85%. He is required to insure each Grid ID in the county at the same coverage level.

Productivity Factor
Joe Rancher chooses a productivity factor of 120 percent. Which is defined as: “A percentage factor selected by you that allows you to individualize your coverage based on the productivity of the crops you produce, and that ranges from 60 through 150 percent (selections can be made in one percent increments)”. Only one productivity factor may be selected per county and crop type.

County Base Value
By looking at the Pasture, Rangeland, Forage Rainfall Index Reports (rates and subsidies), Joe Rancher sees that the county base value per acre for grazingland is $17.65 (For more information on premiums, rates, and subsidies contact your agent).

Dollar Amount of Protection per Acre
The Dollar Amount of Protection per acre is the result of multiplying the County Base value, times the coverage level selected, times the productivity factor percentage selected. Joe Rancher’s Dollar Amount of Protection per Acre is calculated as follows:

\[
\text{\$ Amt of Protection per Acre} = \text{county base value} \times \text{coverage level selected} \times \text{productivity factor selected}
\]

\[
= \$17.65 \times 0.85 \times 1.20
\]

\[
= \$18.00 \text{ per Acre}
\]
Percent of Insured Acreage per Index Interval and Number of Insured Acres per Index Interval

Joe Rancher is required to designate a specific percentage of the insured acreage to at least two of the Index Intervals for each Grid ID, crop type, and share.

Joe Rancher and his agent look up the Special Provisions of Insurance for Texas. In Andrews County, he finds that he can place no more than 50% of his insured acreage to any one Index Interval. However, if he chooses an Index Interval, he must place a minimum of 10% of his insured acreage in that chosen Index Interval. He also learns that the sum of all the insured acres per Index Interval must equal 100% or the total number of insured acres for each Grid ID, crop type, and share.

Joe Rancher chooses the following percent of insured acreage per Index Interval in which he can now calculate the number of acres per Index Interval (also listed in the table is the unit number based on his decisions):

<table>
<thead>
<tr>

Policy Protection per unit

To figure out the policy protection per unit, Joe Rancher must multiply the Dollar Amount of Protection per Acre, which was already calculated as $18.00 times the number of insured acres per unit (crop type, Grid ID, Index Interval, and share), times his applicable share. The following table illustrates the result of that calculation.

<table>
<thead>
<tr>
<th>Grid ID</th>

<tr>
<td>Policy Protection</td>
<td></td>
<td></td>
<td>$8,010</td>
</tr>
</tbody>
</table>

Policy Protection

The Policy Protection is the sum of the policy protection per unit(s), and in this example equals $8,010.

Premium Rate

Joe Rancher and his agent look up the applicable premium rate using the premium rate tables provided in the actuarial documents or the applicable Rainfall Index Reports (rates and subsidies). The table below shows the premium rate for each Grid ID and Index Intervals (the rates and information used in the example are for illustration purposes and are not actual rates for Andrews County).
For each Index Interval, Joe Rancher will need to determine the Premium/unit using the following formula:

\[
\text{Premium/unit (Index interval)} = \text{\$ amount of protection/acre} \times \text{number of insured acres/unit} \times \text{premium rate} \times \text{adjustment factor of 0.01} \times \text{share}
\]

For example, in Grid 1, his Premium/unit for Index interval I would be calculated as follows:

Total Premium by Grid 1, Index interval I = \$18.00 (\$ amount of protection/acre) \
x 50 insured acres \
x 12.00 (premium rate) \
x 0.01 (adjustment factor) \
x 1.0 (share) \
= \$108

<table>
<thead>
<tr>
<th>Grid ID</th>

</tr>
</tbody>
</table>

The sum of all the premiums per unit equals the Total Policy Premium for grazingland in Andrews County (rates and name are only used for example purposes. They are not the actual rates), which in this example equals $1,065.

**Premium Subsidy**

To find the applicable subsidy percentage, Joe Rancher and his agent refer to the subsidy tables provided in the Pasture, Rangeland, Forage reports (rates and subsidies) or actuarial document. For the coverage level of 85%, the applicable subsidy percentage is 55%.
The Premium Subsidy per Unit is the result of the total Premium per unit multiplied by the applicable Subsidy Percentage. Therefore Joe Rancher’s Premium Subsidy per unit is calculated as follows:

\[
\text{Premium subsidy per unit} = \text{Premium per unit} \times \text{subsidy rate}
\]

Example

\[
= 108 \times 0.55
= 59
\]

**Premium due from Grower**

The Premium due from Grower for each unit (Index Interval) is the result of the Premium per unit minus the Premium Subsidy Amount per unit. Therefore Joe Rancher’s Producer Premium per unit is calculated as follows:

\[
\text{Producer premium per unit} = \text{Premium per unit} - \text{Premium subsidy per unit}
\]

Example Premium Due

\[
= 108 - 59
= 49
\]

Using the above formulas Joe Rancher and his agent calculates the premium subsidy per unit and the producer premium per unit. They sum these columns to determine the Total subsidy amount and the Total Producer Premium. The table below provides a summary of these calculations.

<table>

Rainfall Index Worksheet

Joe Rancher and his agent can view all of these calculations and a summary of this information for the county by utilizing the RI Worksheet and accompanying instructions contained in Exhibit 1 of this handbook. This will allow them to see everything organized into one document.

At the time of Loss

At the end of the insurance period, the FCIC issues a Final Grid Index for Joe Rancher’s insured grids. As determined above, his Trigger Grid Index is 85 for all grids and Index Intervals. The following table illustrates the Final Grid Index for each grid and Index Interval and whether the Final Grid Index is above or below the Trigger Grid Index.

<table>

Calculating Indemnities

A payment is only made if the Final Grid Index for the insured unit is less than the Trigger Grid Index, regardless of the individual’s actual precipitation in that Index Interval.

Payment calculation factor = \( \frac{\text{Trigger Grid Index} - \text{Final Grid Index}}{\text{Trigger Grid Index}} \)
Indemnity payment = Payment calculation factor
                    \times \text{Policy protection per unit}

Grid 1 – 100 Acres

Index Interval I: The Final Grid Index of 120 is above the Trigger Grid Index of 85. No indemnity is due.

Index Interval II: The Final Grid Index of 100 is above the Trigger Grid Index of 85. No indemnity is due.

Grid 2 – 50 Acres

Index Interval I: The Final Grid Index of 110 is above the Trigger Grid Index of 85. No indemnity is due.

Index Interval II: The Final Grid Index of 90 is above the Trigger Grid Index of 85. No indemnity is due.

Index Interval VI: The Final Grid Index of 70 is below the Trigger Grid Index of 85. The indemnity is calculated as follows:

\[
\text{Payment calculation factor} = \frac{(85 - 70)}{85} \approx 0.176
\]

\[
\text{Indemnity payment} = 0.176 \times $360 = $63
\]

Grid 3 – 100 Acres

Index Interval I: The Final Grid Index of 110 is above the Trigger Grid Index of 85. No indemnity is due.

Index Interval VI: The Final Grid Index of 60 is below the Trigger Grid Index of 85. The indemnity is calculated as follows:

\[
\text{Payment calculation factor} = \frac{(85 - 60)}{85} \approx 0.294
\]

\[
\text{Indemnity payment} = 0.294 \times $450 = $132
\]
Grid 4 – 245 Acres

**Index Interval I:** The Final Grid Index of 120 is above the Trigger Grid Index of 85. No indemnity is due.

**Index Interval II:** The Final Grid Index of 70 is below the Trigger Grid Index of 85. The indemnity is calculated as follows:

\[
\text{Payment calculation factor} = \frac{(85 - 70)}{85} = \frac{15}{85} = .176
\]

\[
\text{Indemnity payment} = .176 \times 1,323.00 = 233
\]

**Index Interval III:** The Final Grid Index of 60 is below the Trigger Grid Index of 85. The indemnity is calculated as follows:

\[
\text{Payment calculation factor} = \frac{(85 - 60)}{85} = \frac{25}{85} = .294
\]

\[
\text{Indemnity payment} = .294 \times 882.00 = 259
\]

A total indemnity of $687 will be due to Joe Rancher, for this County, for this crop year.
Appendix A: Pasture, Rangeland, Forage

This appendix, along with the Rainfall Index (RI) Crop Insurance Standards Handbook, Basic Provisions, PRF Crop Provisions (RI-PRF) and Special Provisions, provides information for those involved with the RI plan of insurance. Because of the broad scope of information covered by this handbook, the information provided in this Appendix provides additional clarification and requirements specific to the RI-PRF plan of insurance. The information provided in this Appendix does not affect the construction or meaning of any of the policy provisions.

1. SPECIAL INSTRUCTIONS

In addition to standards provided in Section 2 of this handbook:

RI-PRF Definitions:

- **Dollar amount of protection per acre** – The county base value per acre, specified in the actuarial documents for each county, crop, type, and practice is determined by multiplying the selected coverage level by the selected productivity factor. The insured will only have one dollar amount of protection per acre for each crop and type.

- **Index interval** – A period of time during which precipitation data is collected that is used to calculate the expected grid index and final grid index, which is designated as a practice on the Special Provisions. The insured must select more than one practice (index interval) during the crop year for each type, share, and grid ID.

- **Insured acres** – Insured acres do NOT have to equal the insured’s insurable acres. The insured may select the number of acres to be insured. However, the amount of insured acres in the county cannot exceed 100 percent of the insured’s insurable acres in the county.

- **Practice** – Periods of time labeled as index intervals and are contained in the Special Provisions. The insured cannot select a separate coverage level or dollar amount of protection per acre for each practice (index interval) for RI-PRF.

- **Types** – Grazingland and hayland.

- **Unit** – The insured acres within or assigned to a grid ID for each crop, type, practice, and share, in the county.
The following provides clarification related to what an insured can select as it relates to crop, type, practice, etc. and how they are reported, for insurance, insurability, coverage, etc.:

- The insured will have only one dollar amount of protection per acre for each type, while the amount of premium and indemnity will be calculated separately for each unit.
- The insured is not required to insure all of the insurable acres in the county under the PRF policy. The number of insured acres in the county is selected by the insured to be insured.
- The dollar amount of protection per acre is equal to the selected county base value per acre multiplied by the selected coverage level (70% - 90%) and the selected productivity factor (60% - 150%) specified in the county actuarial documents for the type.
- The insured will have only one dollar amount of protection per acre for each crop, and type provided in the actuarial documents for the county.
- The insured’s policy protection for each unit is equal to the dollar amount of protection per acre multiplied by the insured acres multiplied by the share as shown on the Summary of Coverage.
- Separate points of reference must be established for each type in a grid.
- CAT is not available under the RI-PRF plan of insurance, and any reference to CAT in the RI Crop Insurance Standards Handbook is not applicable.

2. INSURANCE CONTRACT INFORMATION

A. INSURABILITY

In addition to standards provided in Section 3C(5) of this handbook:

More than one PRF type is available in a county. Because more than one type is available in a county, and the Crop Provisions allow, the applicant may choose to insure grazingland, hayland, or both.

However, grazingland and hayland cannot both be insured on the same acreage. If the insured acres are intended to be utilized as both grazingland and hayland, and meet the requirements of both types, the insured must choose one type to report and insure the acreage. The insured may choose to change the type in subsequent crop years, as long as the acreage continues to meet the requirements of the type selected.
B. **YIELD HISTORY AND PRODUCTION RECORDS**

In addition to the standards provided in Section 3E(1) of this handbook:

Insureds are NOT required to report yield history or maintain production records.

3. **UNDERWRITING**

A. **GENERAL APPLICATION REQUIREMENTS**

In addition to the standards provided in Section 4 B (7) of this handbook:

**Insured Acres:** As The insured acres do NOT have to equal your insurable acres.

The applicant must designate a specific percentage of the insured acres to at least two practices listed in the Special Provisions for each grid ID, type, and share. The sum of all the insured acres per unit must equal 100% of the insured acres for each grid ID by type and share.

The maximum and minimum percentage of insured acres allowed in any one practice, by grid ID, type and share, is further defined in the Special Provisions.

B. **ACREAGE REPORT FORM REQUIREMENTS**

In addition to the standards provided in Section 4E(6) of this handbook:

**Unit Number:** The insured acres within or assigned to a grid ID for each type, practice, and share accounts for a unit.

For example, a policyholder chooses to insure non-contiguous acreage of grazingland and hayland that happens to lie in a single grid ID. The policyholder selects two practices per type and has a 100 percent share. The unit structure will be:

- Unit 00100, Grazingland, Practice = Index Interval II
- Unit 00200, Grazingland, Practice = Index Interval III
- Unit 00100, Hayland, Practice = Index Interval II
- Unit 00200, Hayland, Practice = Index Interval III
C. ACREAGE REPORT REVIEW CRITERIA

In addition to the standards provided in Section 4G(1) of this handbook:

Total acres of the type versus insurable and insured acres in the county:
Proof of total acres in the county can be established by the insured by providing documentation of acreage measured by FSA or an independent third party (which could include, but is not limited to, an approved measuring service, land surveys, other federal government agencies, legal land deed, or tax document, which provides a detailed measurement of acreage). It is the insured’s responsibility to provide acceptable documentation of PRF acreage for a review. Documentation must specify and distinguish the acreage for the insured type from other crop acreage.

In addition to the standards provided in Section 4G(2) of this handbook:

Insureds will be able to prove shares by providing acceptable verifiable and written documentation. Acceptable verifiable proof of lease/share agreements that an insured can utilize include, but not limited to, hand written documents (with signatures), invoices, etc. Verbal agreements are NOT acceptable verifiable documentation. Written documentation must include legal descriptions or a method to clearly identify the location of the lease.
Appendix B: Apiculture

This appendix, along with the Rainfall Index (RI) Crop Insurance Standards Handbook, Basic Provisions, API Crop Provisions (RI-API) and Special Provisions, provides information for those involved with the RI plan of insurance. Because of the broad scope of information covered by this handbook, the information provided in this Appendix provides additional clarification and requirements specific to the RI-API plan of insurance. The information provided in this Appendix does not affect the construction or meaning of any of the policy provisions.

As previously stated, for ease in the administration of the terms of this policy and to avoid the duplication of documents, as used throughout the Basic Provisions and applicable handbooks and directives, the term “acre” is replaced by “colony;” “acres” and “acreage” is replaced by “colonies;” “acreage report” is replaced by “colony report;” and “acreage reporting date” is replaced by “colony reporting date.”

1. SPECIAL INSTRUCTIONS

In addition to standards provided in Section 2 of this handbook:

RI-API Definitions:

- **Dollar amount of protection per colony** – The county base value per colony, specified in the actuarial documents, for each county, crop, type, and practice is determined by multiplying the selected coverage level by the selected productivity factor. The insured will only have one dollar amount of protection per colony for the county.

- **Index interval** – A period of time during which precipitation data is collected that is used to calculate the expected grid index and final grid index, which is designated as a practice on the Special Provisions. The insured must select more than one practice (index interval) during the crop year for each share and grid ID.

- **Insured colonies** – Insured colonies do NOT have to equal insurable colonies for the insured. The insured may select the number of colonies to be insured. However, the amount of insured colonies in the county will not exceed 100 percent of the insured’s insurable colonies in the county.

- **Locations** – The physical point of residence of hives on a tract of land or acreage.

- **Practice** – Periods of time labeled as index intervals and are contained in the Special Provisions. The insured cannot select a separate coverage level or dollar amount of protection per colony for each practice (index interval) for the RI-API.

- **Types** – There are no types available.
The insured colonies within or assigned to a grid ID, by share and practice in the county.

The following provides clarification related to what an insured can select as it relates to crop, practice, etc. and how they are reported, for insurance, insurability, coverage, etc.:

- The insured will have only one dollar amount of protection per colony, while the amount of premium and indemnity will be calculated separately for each unit.
- The insured is not required to insure all of the insurable colonies in the county under the API policy. The insured colonies in the county are the number of colonies selected by the insured to be insured.
- The dollar amount of protection per colony is equal to the selected county base value per colony multiplied by the selected coverage level (70% - 90%) and the selected productivity factor (60% - 150%) specified in the county actuarial documents for the crop.
- The insured will have only one dollar amount of protection per colony for the crop.
- The insured’s policy protection for each unit is equal to the dollar amount of protection per colony multiplied by the insured colonies multiplied by the share as shown on the Summary of Coverage.
- CAT is not available under the RI-API plan of insurance. Any reference in the RI Crop Insurance Standards Handbook to CAT is not applicable.

2. INSURANCE CONTRACT INFORMATION

A. INSURABILITY

In addition to standards provided in Section 3C(5) of this handbook:

There are no additional types available for the RI-API plan of insurance.

The same colonies cannot be insured in any other county, state, grid, or plan of insurance in the United States.

B. YIELD HISTORY AND PRODUCTION RECORDS

In addition to the standards provided in Section 3-E-(1) of this handbook:

Insureds are NOT required to report yield history or maintain production records for the RI-API policy.
A. GENERAL APPLICATION REQUIREMENTS

In addition to the standards provided in Section 4B(4) of this handbook:

Eligible County: County as defined in the Crop Provisions, also includes any acreage, which contains locations occupied by insurable colonies contained within a grid ID that crosses an adjoining county line where the acreage and colonies are contiguous. In this definition, colonies shall not be substituted for acreage.

In addition to the standards provided in Section 4B(7) of this handbook:

Insured Colonies: As provided in the RI-API Crop Provisions, the insured colonies do NOT have to equal the insurable colonies.

The applicant must designate a specific percentage of the insured colonies to at least two practices listed in the Special Provisions for each grid ID and share. The sum of all the insured colonies per unit must equal 100% of the insured colonies for each grid ID by share.

The maximum and minimum percentage of insured colonies allowed in any one practice, by grid ID, and share is further defined in the Special Provisions.

In addition to the standards provided in Section 4B(7) (c) of this handbook:

The insured must certify that the selected practices support the vegetation production necessary to support the insured crop.

B. GENERAL COLONY REPORTING REQUIREMENTS

In addition to the standards provided in Section 4D of this handbook:

United States Colonies: The insured must report ALL colonies in which they have a share in the United States. This number must be reported on all colony report forms for the insured regardless of state, county, or plan of insurance. As provided in section 4E, an AIP may utilize unused columns of their acreage report form to accommodate the required entry.
C. **ACREAGE REPORT FORM REQUIREMENTS**

In addition to the standards provided in Section 4E(1) of this handbook:

Insurable Colonies: The insured must possess written documentation, at the time of application, documentation of insurability of the colonies for all counties selected for insurance. Documentation may include, but is not limited to, history of locating colonies in the county, land ownership in the county in which colonies are located, a lease agreement allowing the placement of colonies on acreage, etc.

In addition to the standards provided in Section 4E(6) of this handbook:

**Unit Number:** The insured colonies within or assigned to a grid ID for each crop and share accounts for a unit. For example:

- Unit **00100**, Apiculture, share 100%, Practice = Index Interval II
- Unit **00200**, Apiculture, share 100%, Practice = Index Interval III
- Unit **00300**, Apiculture, share 50%, Practice = Index Interval II
- Unit **00400**, Apiculture, share 50%, Practice = Index Interval III

There is no basic unit discount and optional units are not applicable.

D. **ACREAGE REPORT REVIEW CRITERIA**

In addition to the standards provided in Section 4G(1) of this handbook:

**Total colonies versus insurable and insured colonies in the county:** In addition to total insurable and insured colonies in the county, the review should confirm that all colonies in the United States in which the insured has a share were also reported. Proof of actual colonies and their insurability is the responsibility of the insured and can be established by maintaining and providing documentation of colony numbers in the county and United States. Acceptable types of colony documentation the insured can use may include, but are not limited to, FSA or other federal or state governmental reporting systems/requirements, tax records, transportation invoices, purchase agreements, bill of sales, legal deeds, etc.

The insured must possess, at the time of application, acceptable verifiable written documentation of insurability of the colonies in the county, for all counties selected for insurance. Documentation may include, but is not limited to, history of locating colonies in the county, land ownership in the county in which colonies are located, a lease agreement allowing the placement of colonies on acreage, handwritten documents/statement (with signatures), etc. Verbal agreements are not acceptable verifiable documentation.
In addition to the standards provided in Section 4G(2) of this handbook:

The insured will be able to prove shares by providing acceptable verifiable and written documentation. Acceptable verifiable proof of lease/share agreements that an insured can utilize include, but are not limited to, hand written documents (with signatures), invoices, etc. Verbal agreements are NOT acceptable verifiable documentation.
Appendix C: FSA Decisions on NAP and Other Programs

I. NAP COVERAGE AND RI-PRF

A. BACKGROUND

Section 196(a)(2)(A) of the 1996 Act provides that commercial crops or other agricultural commodities, except livestock, that is produced for food or fiber for which CAT coverage is not available through RMA shall be an eligible crop under the NAP. NAP currently provides benefits for forage crop losses. Therefore, NAP will continue to be available to producers in those counties covered by the Pilot PRF programs.

A producer could obtain both an RI policy and NAP on the same crop, with the same intended use, e.g., grazing land, because the policy is limited to lack of precipitation as a cause of loss and does not cover all perils. However, if the producer earns an indemnity payment under the policy for a specific intended use, then the producer is ineligible for a NAP payment for the same intended use.

Because the RMA RI policy only covers losses based upon a deviation from the historical average index, NAP must be made available to producers on the same crop to provide coverage for losses resulting from other eligible NAP disaster conditions, such as flood, fire, and freeze.

B. REQUIREMENTS WHEN A PRODUCER REQUESTS RI-PRF AND OBTAINS NAP COVERAGE

A producer with NAP must cover all acreage of the forage species with the same intended use in the producer’s unit for all perils.

Notes: An argument could be made that a producer could suffer a loss from a reduction of rainfall and another eligible NAP disaster condition, such as freeze on the same crop/ acres, and therefore the producer should receive both a NAP payment and an RMA indemnity because they are different losses. However, this is not the case. Under the RI-PRF policy the producer does not have to insure all acres and only has to select insurance coverage for two, 2-month index intervals for the acreage insured. Under NAP, loss determinations are based upon the conditions over the entire growth period for the unit, not for a specific time period in which the disaster occurred.

Accordingly, if a producer suffered both a freeze and a reduction in rainfall on the same acres during the crop year, any NAP payment would be based, at least in part, on the loss associated to the reduction of rainfall as well as the freeze.
Producers could obtain NAP coverage on forage acreage intended for grazing and an RI-PRF policy on forage acreage intended for mechanically harvested forage, or vice versa, because they are considered separate crop types by RMA, and separate crops under FSA’s NAP program.

<table>
<thead>
<tr>
<th>If the producer has…</th>
<th>Then …</th>
</tr>
</thead>
</table>
| Purchased, or intends to purchase, an RI-PRF policy for any of the grazing acres for any interval and grid in the NAP unit | • the only peril covered by the RI-PRF policy is the reduction of precipitation from the historical average index  
• he/she may obtain NAP coverage on the same acreage for losses due to other perils such as fire, flood, and freeze  
• he/she will not be eligible for any NAP benefit on any of the forage acreage intended for grazing in the unit if he/she earns an indemnity payment under the RI-PRF policy regardless of whether all acres are covered under the RI-PRF policy.  
• same provisions apply to his forage acreage intended for forage that is covered by an RI-PRF policy. |
| not purchased an RI-PRF policy for any of the grazing acres for any interval and grid in the NAP unit | • may obtain NAP coverage on his forage acreage intended for grazing  
• will be ineligible for NAP benefits if he does obtain an RI-PRF policy on any of his forage acreage in the unit intended for grazing and earns an indemnity payment under the RI-PRF policy  
• the same provisions apply to his forage acreage intended for mechanically harvested forage if he obtains an RI-PRF policy. |

2. RESERVED FOR DISASTER PROGRAM INFORMATION.
