1. INTRODUCTION

This handbook identifies the crop-specific procedural requirements for adjusting Multiple Peril Crop Insurance (MPCI) losses in a uniform and timely manner. These procedures, which include crop appraisal methods and claims completion instructions, supplement the general (not crop-specific) procedures, forms, and manuals for loss adjustment identified in the Loss Adjustment Manual (LAM).

2. SPECIAL INSTRUCTIONS

This handbook remains in effect until superseded by reissuance of either the entire handbook or selected portions (through slipsheets or bulletins). If slipsheets have been issued for a handbook, the original handbook as amended by slipsheet pages shall constitute the handbook. A bulletin can supersede either the original handbook or subsequent slipsheets.

A. DISTRIBUTION

The following is the minimum distribution of forms completed by the adjuster for the loss adjustment inspection:

One legible copy to insured. The original and all remaining copies as instructed by the insurance provider.

NOTE: It is the insurance provider’s responsibility to maintain original insurance documents relative to policyholder servicing as designated in their approved plan of operations.

B. TERMS, ABBREVIATIONS, AND DEFINITIONS

1. Terms, abbreviations, and definitions that are general (not crop specific) to loss adjustment are identified in the LAM.

2. Terms, abbreviations, and definitions specific to California avocado loss adjustment and this handbook, which are not defined in this section, are defined as they appear in the text.

3. Abbreviation(s):

   - BCCR: Barclay’s California Code of Regulations
   - CAC: California Avocado Commission
   - CDF: California Department of Food and Agriculture
   - SSAP: Standardized Season Average Price
(4) Definition(s):

**Amount of Insurance Per Acre**
An amount determined by multiplying the approved average revenue per acre by the coverage level percentage the insured elects.

**Crop Year**
The period beginning December 1 of the calendar year prior to the year in which the avocado trees normally bloom and extending through November of the year following such bloom, and will be designated by the calendar year following the year in which avocado trees normally bloom.

**Direct Marketing**
Sale of the insured crop directly to consumers without the intervention of an intermediary such as a wholesaler, retailer, packer, processor, shipper, or buyer. Examples of direct marketing include selling through an on-farm or roadside stand, farmer's market, and permitting the general public to enter the fields for the purpose of picking all or a portion of the crop.

**Harvest**
The picking of the avocados from the trees or ground by hand or machine.

**Loss of Revenue**
An insurable cause of loss that occurs when the standardized season average price per pound causes the farm revenue to drop below the amount of insurance.

**Marketing Year**
The period from November 1 of a calendar year through October 31 of the succeeding calendar year and designated by the succeeding calendar year.

**Set Out**
Transplanting an avocado tree into the grove.

**Standardized Season Average Price**
The average price per pound determined by dividing the value of all 'Hass' avocados in the state by the pounds of 'Hass' avocados produced in the state for a marketing year, as reported by the California Avocado Commission and may be adjusted by FCIC to state prices based on current dollar values.

**Stump(ing)**
Reducing trees to a height of 4 to 6 feet by removing all branches and foliage.

---

3. INSURANCE CONTRACT INFORMATION

The insurance provider is to determine that the insured has complied with all policy provisions of the insurance contract. Crop provisions which are to be considered in this determination include (but are not limited to):
A. **INSURABILITY**

(1) The crop insured, will be all commercially-grown avocados in the county **grown on insurable acreage, and** for which a premium rate is provided by the actuarial documents:

(a) In which the insured has a share;

(b) That are grown for harvest as avocados;

(c) That are irrigated;

(d) That are grown on trees that, if inspected, are considered acceptable by the insurance provider;

(e) **That are grown on trees that** have reached the sixth growing season after being set out. The insurance provider may agree in writing to insure avocados on acreage that has not reached this age if acreage has produced at least 2,000 pounds of avocados per acre.

(2) Avocado trees interplanted with another perennial crop are insurable, unless the insurance provider inspects the acreage and determines it does not meet the insurability requirements contained in the **Pilot Avocado Crop Provisions**.

(3) Any unit that is 100 percent stumped will not be insurable until the third crop year after the crop year in which the stumping was completed.

**NOTE**: The following statements are taken from the current Special Provisions and may not apply for succeeding crop years.

(4) If a producer is eligible to receive an indemnity under CAT coverage and benefits compensating him or her for the same loss under any other USDA program, the producer must elect the program from which they wish to receive benefits.

(5) Any unit that 35 percent or more of the bearing trees have been removed or stumped in the previous year is not insurable unless the insurance provider agrees in writing to insure the unit. Written agreements are not available for CAT.

B. **PROVISIONS NOT APPLICABLE TO CAT COVERAGE**

(1) Optional units.

(2) Written Agreements.

(3) Hail and Fire Exclusion provisions (also not applicable if additional coverage is less than 65/100 or comparable coverage).

**NOTE**: Refer to the CIH and the LAM for other provisions not applicable to CAT.
C. UNIT DIVISION

Refer to the insurance contract for unit provisions. NOTE: Unless limited by the Crop or Special Provisions, a basic unit, as defined in the Basic Provisions, may be divided into optional units if, for each optional unit, all the conditions stated in the applicable provisions are met.

4. CALIFORNIA AVOCADO APPRAISALS

A. GENERAL INFORMATION

(1) These procedures apply when appraising potential production of avocados on the ground under and on the sample trees if the producer does not harvest production.

NOTE: Avocado trees are generally harvested more than once to remove a single crop. It may not be necessary to appraise fruit on the tree unless the insured does not intend to pick any more of the crop. If the insured does not intend to pick more of the crop, an appraisal must be performed. Avocados on the trees will most likely be eventually marketed. Fruit on the ground under the trees is probably not marketable unless it is picked up soon after falling. According to the official Barclay’s California Code of Regulations for Avocados, windfall fruit must be picked up within five days of falling and can be marketed two sizes below the smallest size released for harvest.

(2) Make separate appraisals for each variety of insurable avocados grown in the grove.

(3) To help prevent the spread of the most serious disease (Avocado Root Rot) affecting avocados, the following precautions should be adhered to when appraising avocados:

(a) Carry a spray bottle of alcohol to disinfect bottom of shoes.

(b) Enter with a clean vehicle (free of mud) and be careful not to stir up dust when driving.

(c) Ladders, boxes, bins, etc., should be free of mud before entering the orchard.

(4) In addition to circumstances specified in the LAM, avocado appraisals are to be made:

(a) When the insured chooses not to harvest any acreage

(b) When mature production remains after final harvest, or

(c) When mature production remains on the tree when stumped or removed.

(5) Growers will normally harvest mature avocados prior to stumping; therefore, appraisals are generally not needed. The stumping process will remove the crop that would have been harvested the following year. This change in practice is addressed in the Pilot Avocado Crop Provisions and the actuarial documents.
B. SELECTING REPRESENTATIVE SAMPLES FOR APPRAISALS

Determine the number and general location of trees to be used in the representative sample based on:

(1) Total acreage and number of trees;

(2) Extent of variation in the amount of production or damage within the acreage and location of the fruit on the tree;

**NOTE:** When variable damage causes the crop potential to be significantly different within the same grove, or when the insured wishes to destroy or stump a portion of the grove, split the grove into subgroves, and appraise each one separately.

(3) Percent of each insurable variety in the acreage;

(4) Tree age, size, density and vigor;

(5) The acreage in the unit from which fruit has been picked and the extent of variation in the amount of unpicked fruit on the trees; and

(6) Whether or not any areas have been color (partially) picked.

(7) Use as many samples as necessary to accurately determine potential production, but not less than the number of trees for the number of acres shown in Table A.

C. GROWTH STAGES

Growth stages do not apply to avocado appraisals, but crop years are very important and must be designated.

5. APPRAISAL METHODS

A. GENERAL INFORMATION

These instructions provide information on appraisal methods for:

<table>
<thead>
<tr>
<th>Appraisal Method</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mature avocado appraisal method</td>
<td>only after general maturity of the crop.</td>
</tr>
</tbody>
</table>
B. MATURE AVOCADO APPRAISAL METHOD

NOTE: Defer all appraisals until the crop reaches maturity. There is no appraisal method for immature fruit.

(1) If no acreage on the unit has been harvested, arrange with the insured to harvest avocados on the ground under and on representative trees. Document such inspections in the Narrative section of the claim form or on a special report.

(2) Appraise each variety as a separate sample.

(3) Select representative sample trees for fruit weights.

(4) Weigh and record on the appraisal worksheet all avocados on the ground under and on representative trees and fruit lost due to uninsured causes on the ground under the sample tree.

(5) Convert fruit weights from sample trees to pounds of appraised production for the unit.

6. APPRAISAL DEVIATIONS AND MODIFICATIONS

A. DEVIATIONS

Deviations in appraisal methods require FCIC written authorization (as described in the LAM) prior to implementation.

B. MODIFICATIONS

There are no pre-established modifications contained in this handbook. See the LAM for additional information.

7. APPRAISAL WORKSHEET ENTRIES AND COMPLETION PROCEDURES

A. GENERAL INFORMATION

(1) Include the insurance provider’s name in the appraisal worksheet title if not preprinted on the insurance provider’s worksheet or when a worksheet entry is not provided.

(2) Include the claim number on the appraisal worksheet (when required by the insurance provider) when a worksheet entry is not provided.
(3) Separate appraisal worksheets are required for each unit or plot inspected. Refer to section 4 for sampling instructions.

**NOTE:** Standard appraisal worksheet items are numbered consecutively in subsection B. An example appraisal worksheet is also provided to illustrate how to complete entries.

8. CLAIM FORM ENTRIES AND COMPLETION PROCEDURES

A. GENERAL INFORMATION

(1) The claim form (hereafter referred to as “Production Worksheet”) is a progressive form containing all notices of damage for all preliminary and final inspections on a unit.

(2) If a Production Worksheet has been prepared on a prior inspection, verify each entry and enter additional information as needed. If a change or correction is necessary, strike out all entries on the line and re-enter correct entries on a new line. The adjuster and insured should initial any line deletions.

(3) Refer to the LAM for instructions regarding the following:

   (a) Acreage report errors.

   (b) Delayed notices and delayed claims.

   (c) Corrected claims or fire losses (double coverage) and cases involving uninsured causes of loss, unusual situations, controversial claims, concealment, or misrepresentation.

   (d) Claims involving a Certification Form (when all the acreage on the unit has been appraised to be put to another use or other reasons described in the LAM).

   (e) “No Indemnity Due” claims (which must be verified by an APPRAISAL or NOTIFICATION from the insured that the production exceeded the guarantee).

(4) The adjuster is responsible for determining if any of the insured’s requirements under the notice and claim provisions of the policy have not been met. If any have not, the adjuster should contact the insurance provider.

(5) If notice of damage was given, an inspection is necessary to verify the amount of damage and that passing grade fruit has been picked up and delivered to the packer. The insured’s signature is required.

(6) Instructions labeled “PRELIMINARY” apply to preliminary inspections only. Instructions labeled “FINAL” apply to final inspections only. Instructions not labeled apply to ALL inspections.

B. FORM ENTRIES AND COMPLETION INFORMATION

#### DISTANCE BETWEEN ROWS (In Feet)

For spacing not shown on the charts: Multiply the distance between plants (nearest tenth foot) times the distance between rows (nearest tenth foot) and divide the result into 43,560. Round result to the nearest whole number.

**EXAMPLE:** 6.5 FT. x 10.0 FT. = 65.0 SQ. FT.  
43,560 ÷ 65.0 SQ. FT. = 670 PLANTS PER ACRE

**Example Calculation:**
6.5 FT. x 10.0 FT. = 65.0 SQ. FT.  
43,560 ÷ 65.0 SQ. FT. = 670 PLANTS PER ACRE

*** The official Barclay’s California Code of Regulations can be purchased and must be used in all court proceedings. However, for ease of reference, the unofficial California Code of Regulations can be accessed at http://ccr.oal.ca.gov/. The unofficial California Code of Regulations can be found in TITLE 3. Food and Agriculture, Division 3. Economics, Chapter 1. Fruit and Vegetable Standardization, Subchapter 4. Fresh Fruits, Nuts and Vegetables, Article 11.
The following letter will be issued by the California Department of Agriculture each season prior to the beginning of harvest. It contains information regarding release/maturity dates for fruit of a certain size. This letter pertains to the 2004/2005 crop year.

**RELEASE DATE**

The date listed for each avocado variety/size group is the earliest date in which that particular size or larger may be delivered to the packer.

As stated in sections 1408.22 of the amended Code of Regulations, when abnormal fruit drop is caused by extreme winds, there is up to a five day period after the winds have ended where windfall fruit which is not more than two sizes below the smallest size released for harvest may be picked up and tested for maturity.
